ABSTRACT

Mariani, Dewi. 2019. *Students' English Speaking Anxiety at SMAN 2 Palangka Raya*. Thesis, Department of Language Education, Faculty of Teacher Training and Education, State Islamic Institute of Palangka Raya. Advisors: (I) Hj. Apni Ranti, M.Hum.,(II) Akhmad Ali Mirza, M. Pd.

Key words: Speaking Anxiety, Speaking English.

This research was aimed to know students' difficulties in speaking English. The study was carried out on language major in SMAN 2 Palangka Raya. Especially in English language subject, in tenth grade, eleventh grade and twelfth grade.

The design of the study was survey design in quantitative approach design involved 67 students in Language major at SMAN 2 Palangka Raya. It used purposive sampling. In order to collect the data, the researcher used questionnaire.

The result finding covered: the types of anxiety in speaking English and also knowing the factor of anxiety in speaking English. The result for types of anxiety are: trait anxiety (47%), specific situation anxiety (47%), state anxiety (50%). The result showed they were getting neutral anxious in speaking English. The researcher concludes that the majority of the students at SMAN 2 Palangka Raya had type of speaking anxiety which was state anxiety. The reason of researcher categorized them into state anxiety can be seen from the questionnaire result, at 50%. The questionnaire result also showed that they had state anxiety. Based n the result, the factor of students' anxiety in speaking English is categorized into fear of negative evaluation.

ABSTRAK

Mariani, Dewi. 2019. *Kecemasan Siswa Berbicara Bahasa Inggris di SMAN 2 Palangka Raya*. Skripsi, Jurusan Pendidikan Bahasa, Fakultas Tarbiyah dan Ilmu Keguruan, Institut Agama Islam Negeri Palangka Raya. Pembimbing: (I) Hj. Apni Ranti, M.Hum.,(II) Akhmad Ali Mirza, M. Pd.

Kata Kunci: Kecemasan Berbicara, Berbicara Bahasa Inggris.

Penelitian ini bertujuan untuk mengetahui kesulitan siswa dalam berbicara bahasa Inggris. Penelitian ini dilakukan pada jurusan bahasa di SMAN 2 Palangka Raya. Terutama dalam mata pelajaran bahasa Inggris, di kelas sepuluh, kelas sebelas dan kelas dua belas.

Teknik penelitian ini adalah desain survei dengan pendekatan kuantitatif yang terdiri dari 67 siswa jurusan Bahasa di SMAN 2 Palangka Raya. Penelitian ini menggunakan metode purposive sampling. Untuk mengumpulkan data, peneliti menggunakan angket.

Temuan hasil meliputi: jenis kecemasan dalam berbicara bahasa Inggris dan juga mengetahui faktor kecemasan dalam berbicara bahasa Inggris. Hasil untuk jenis kecemasan adalah: kecemasan sifat (47%), kecemasan situasi khusus (47%), kecemasan sesaat (50%). Hasilnya menunjukkan mereka mulai cemas netral dalam berbicara bahasa Inggris. Peneliti menyimpulkan bahwa mayoritas siswa di SMAN 2 Palangka Raya memiliki jenis kecemasan berbicara yang merupakan kecemasan sesaat. Alasan peneliti mengelompokkannya menjadi menyatakan dapat dilihat dari hasil kuesioner, yaitu 50%. Hasil kuesioner juga menunjukkan bahwa mereka memiliki kecemasan sesaat. Berdasarkan hasilnya, faktor kecemasan siswa dalam berbicara bahasa Inggris dikategorikan ke dalam ketakutan akan evaluasi negatif.

ACKNOWLEDGMENTS

The researcher would like to express her sincere gratitude to Allah SWT. For the blessing bestowed in her whole life particularly during the thesis writing without which this thesis would not have come to its final form. *Sholawat* and *salam* always be bestowed to the last prophet Muhammad SAW., having shown us the role of life to make our life true.

Her appreciation is addressed to:

1. Dean of Faculty of Teacher Training and Education of the State Islamic Institute of Palangka Raya, Dr.Hj. Rodhatul Jennah, M.Pd., for her invaluable assistance both in academic and administrative matters.
2. Vice Dean in Academic Affairs, Dr. Nurul Wahdah, M.Pd., for her invaluable assistance both in academic and administrative matters.
3. Secretary of Department of Language Education, Akhmad Ali Mirza M.Pd., for his invaluable assistance both in academic and administrative matters.
4. Chair of Study Program of English Education, Zaitun Qamariyah, M. Pd., for her invaluable assistance both in academic and administrative matters.
5. Her thesis advisors, Hj. Apni Ranti, M.Hum. and Akhmad Ali Mirza, M.Pd., for their generous advices, valuable guidance, and elaborated correction during their busy time to the completion of her thesis.
6. Both the members of the board of examiners, for their corrections, comments and suggestions which are profitable to the accomplishing of this thesis.
7. All lecturers of Study Program of English Education from whom she got in-depth knowledge of English and English teaching.

8. Her classmates of Study Program of English education, especially the 2015 period, for the support in sadness and happiness during the study in undergraduate program for their sprits to accomplish her study.
9. Her beloved parents, Jusan Sariman and Salasiah, for their moral support and endless prayer so that she is able to finish her study. May Allah SWT bless them all.

Aamiin.

The background of the page features a large, faint watermark of the IAIN Palangkaraya logo. The logo is a green shield-like shape with a stylized building or book structure inside. At the bottom of the shield, the text "IAIN PALANGKARAYA" is written in a bold, sans-serif font. The entire watermark is semi-transparent.

CHAPTER I

INTRODUCTION

This chapter discusses the background of the study, research problem, objective of the study, hypotheses of the study, scope and limitation of the study, significance of the study and definition of key terms.

A. Background of the Study

Speaking is very important in second language learning. Speaking is a skill which is worthy of attention in both first and second language. Speaking the way to construct words and phrases with individual sounds, use pitch change, intonation and stress to convey different meaning (Harmer, 2007:38).

As a foreign language in Indonesia, English is learned seriously by many people to have a good prospect in the community of international world. Since it is important, English is taught widely at formal schools starting from elementary school up to universities, even at informal school i.e. courses. According Bahrani and Soltani, (2012:27) as a real communication, speaking allows the interlocutor to accomplish a task, such as conveying a message, obtaining the information, or expressing an opinion.

Despite it is mportant , speaking has been overlooked in schools and universities due to different reasons like emphasis on grammar and unfavorable teacher-student proportions. The use of English as a second

language in oral communication is complex activities to be considered when teaching the English language (Al-Sibai, 2004:3).

Speaking is one of the four skills in English subject as a tool to communicate each other. According to Hornby (2000:43), speaking is making use of words in an ordinary voice; uttering words; knowing and being able to use a language; expressing oneself in words; making a speech. But so far there are still many students who are not able to speak English. According to Ur (2001:117), there are many factors that cause difficulty in speaking, they are as follows: inhibition, nothing to say, low or uneven participation and mother tongue. In addition, Raba'ah (2005:15) pointed out that there are many factors that cause difficulties in speaking English. When they want to say something in the classroom they are sometimes inhibited, they are worried about making mistakes and fearful of criticism, they are ashamed of the other students' attention towards themselves. According Littlewood (2007) expressed that a language classroom can also create inhibitions and apprehension for the students.

Empirical research shows that anxious foreign language students are less willing to participate in learning activities, and have lower performance than non anxious students" (Aida 2009, Macintyre and Gardner, 2009:39). So, students anxiety to speak English very important to be solved. Because it can be influence their speaking ability. Beside that, speaking English must be practice to be success pronunciation and vocabulary, especially to improve their speaking ability.

Anxiety can be described as a perceived notion of psychological distress which occurs due to the expectation of a disconcerting and potentially threatening event. Although extensive research has focused on the concept of anxiety, it cannot be defined by purely objective or concrete means” (Rachman, 2004, in Larson, 2007:2) “we define anxiety as emotion characterized by feelings of anticipated danger, tension, and distress and by sympathetic nervous system arousal” (Davidoff, 2001:356).

However, the anxiety experienced is related to language anxiety. Language anxiety is viewed as one of the hindrances for language learners from their successful achievement in a high level of proficiency in a foreign language. (Horwitz, (2010) cited in Kondo, 2007:130). Furthermore, he also stated that language anxiety is restricted only to speaking and listening in the situation where learners communicate spontaneously in their second language.

According to Worde (2003), more than half a foreign language learners experienced some degree of anxiety. It is also argued that language learning anxiety may pose potential problems for language learners, Kondo (2009). In other words, learners who feel anxious in their foreign language may find their study less enjoyable. Moreover, he also added that the learners who feel anxious may have problems such as reduced words production and difficulty in understanding spoken instruction. In addition, Tanver (2007: 5) says that learners of English language often express a feeling of stress, nervousness or anxiety while learning to speak English

and claim to have a mental block against learning English.

The fact that anxiety plays an important in learners learning a foreign language, yet, paying attention to the factors of learning should be taken into consideration. Horwitz (2010:46), believes that anxiety about speaking a certain language can affect students' performance. It can influence the quality of oral language production and makes individual appear less fluent than they really are. This explanation suggests that teacher may consciously create a communal and friendly atmosphere, and may also suggest the students take a proactive role in creating such an environment.

Nowadays, there are a lot of schools that have special program to improve students' speaking skill. One of senior high school in Palangka Raya which has the language program in ten, eleventh, and twelve grade at SMAN 2 Palangka Raya. Many people known SMAN 2 Palangkaraya as one of favorite school in Palangka Raya, the school has known because the school has international standard especially for English in language program. But, even the school has international standard the researcher found out that many students from SMAN 2 Palangka Raya have many anxiety in speaking English. From interviewed last month with some students at language major in SMAN 2 Palangka Raya they said that they have many anxiety when they asked to speak in English.

Based on the explanation above the researcher interested in investigating the cause of students anxiety in SMAN 2 Palangka Raya. The

researcher will conduct a research entitled: **“Students’ English Speaking Anxiety at SMAN 2 Palangka Raya”**.

B. Research Problem

1. What are the types of students’ anxiety in speaking English at SMAN 2 Palangka Raya?
2. What are the factors that contribute students anxiety to speak English?

C. Objective Of The Study

1. To identify the types of students’ anxiety in speaking English at SMAN 2 Palangka Raya.
2. To identify the factor that contribute students anxiety to speak English.

D. Scope and Limitation

This research is conducted at SMAN 2 Palangka Raya, and discusses about the students’ anxiety in speaking English. The study belongs to a quantitative research. This study focused on the students’ anxiety to speak English in English class at the ten, eleventh, and twelve grade of SMAN 2 Palangka Raya, especially to the language class.

E. Significances of the Study

The researcher hopes the result of this study is useful, and this study is expected to be significant in the following ways.

1. Theoretically

This study hopefully can decrease the students speaking anxiety by identifying the problems in speaking by the ten, eleventh, and twelve grade students at language program.

2. Practically

To give contribution in solving the students problems and to inform and to add reference for the researcher's knowledge and the students in language program to improve they skill in Speaking English.

F. Definition of Key Terms

1. Anxiety is the problem in this study; anxiety is one of the psychophysiology difficulties. "Anxiety and fear are sometimes distinguished from one another on two dimensions. The object of a fear is easy to specify, while the object of an anxiety is often unclear. The intensity of a fear is proportional to the magnitude of the danger."
2. Speaking English: in this study means the ability to use English as foreign language to talk about something, to have conversation, or to mention or describe something. Speaking based on David Nunan is described as (the ability to express oneself in the situation, or situation in precise words, or the ability to express a sequence of ideas fluently).
3. Speaking anxiety: is a worry feeling to speak and perform the language that the learner got in foreign language class. Students in speaking class, most of them feel anxious or nervous when they perform in front of class. Because to perform with, or in front of other people is obviously not the same as when no one else is present. It can make them cannot

perform maximal. Learners who feel anxious in their foreign language learning may find their study less enjoyable. Speaking anxiety as something that has a great impact on one's self confidence since it often makes one experience failure when not being able to speak out and show what one knows.

CHAPTER II

REVIEW OF RELATED LITERATURE

This chapter discusses the review of related literature, related studies, definition speaking, and speaking anxiety.

A. Related Studies

Park & Lee (2005) L2 Learners' Anxiety, Self-Confidence and Oral Performance. This study examined the relationships between second language learners' anxiety, self-confidence and speaking performance. The participants of their study were one hundred and thirty two Korean college students who enrolled the English conversation classes. The results of their study indicated that learners' anxiety level was negatively related to their oral performance. The results of the analyses showed that there were significant effects of anxiety and self-confidence on L2 learners' oral performance: The higher anxious the students were about speaking English, the lower scores they gained on their oral performance; The higher confident they were, the higher oral performance they showed. The similarities between Park & Lee and this research is anxiety speaking english from second language learners. The differences is Park & Lee examined the relationships self-confidence and oral performance, and this research is identify the types, the factor and the strategy from the students.

Shabnam Amini Naghadeh (2014) Anxiety and Speaking English as a Second Language among Iranian English Major Students of Payame Noor University.

The study was conducted on a sample of 62 male and female English major students from Payame Noor University. This study attempts to identify potential sources of anxiety relevant to the student's affective needs or concerns in Payame Noor University through the use of foreign language classroom anxiety scale (FLCAS) questionnaire and interview. As the findings indicate, there is a significant inverse relationship between anxiety and speaking English as a second language. The similarities between Shabnam Amini Naghladeh and this study is anxiety speaking English from second language learners. The differences is Shabnam identify potential sources of anxiety and this research is identify the types, the factor and the strategy from the students.

Tanveer (2007) Investigation of the Factors that Cause Language Anxiety for ESL/EFL Learners in Learning Speaking Skills and the Influence it Casts on Communication in the Target Language. Investigates the factors that cause language anxiety for twenty language learners in learning speaking skills and the influence of anxiety on communication in the target language. The findings suggested that language anxiety can originate from learners' own sense of 'self', their self-related cognitions, language learning difficulties, differences in learners' and target language cultures, differences in social status of the speakers and interlocutors and from the fear of losing self-identity. The similarities between tanveer and this research is anxiety speaking English from second language learners and identify the factor of anxiety. The differences are Tanveer give

recommended a variety of strategies and this research is identify the strategy from the students to fix it.

Aydin S. (2008) *An Investigation on the Language Anxiety and Fear of Negative Evaluation among Turkish EFL Learners*. Conducted a study to investigate the sources and levels of fear of negative evaluation as well as language anxiety among Turkish students as EFL learners, and to determine the correlation between the two. A sample group consisted of 112 foreign language learners. The results of the analysis indicated that EFL learners suffer from language anxiety and fear of negative evaluation. Furthermore, fear of negative evaluation itself was found to be a strong source of language anxiety. The similarities between Aydin and this research is language anxiety among students as EFL learners. The differences is Aydin to investigate the sources and levels of fear of negative evaluation and this research is identify the types, the factor and the strategy from the students.

Diao Zhiping (2013) *Anxiety of Speaking English in Class among International Students in a Malaysian University*. The researcher concluded that the teacher's strategies and students' reactions to his strategies are not related to their cultural background but to their affective filters and learning skills common to all human beings. The purpose of the research is to find out what factors that are related to teacher's strategy and students' reaction to the teacher's strategy. The similarities between Diao and this research is anxiety speaking english and the strategy when speaking English in class. The differences is Diao examines teachers' perspectives and reactions towards learners' anxiety and investigates the students' perspectives of teachers' reaction to their feelings of anxiety, and this research is identify the types, the factor from the students.

B. Definition Of Speaking

Brown (2009:48) said Speaking is one of two productive skills in a language teaching. It is defined as a process of building and sharing meaning through the use of verbal or oral form. Speaking consists of producing systematic verbal utterances to convey meaning.

Brown (2000:267) cites that when someone can speak a language it means that he can carry on a conversation reasonably competently. In addition, he states that the benchmark of successful acquisition of language is almost always the demonstration of an ability to accomplish pragmatic goals through an interactive discourse with other language speakers.

Speaking is one of tools of human communication, produce sound, words, intonation and articulation. Speaking is to speak is to utter words or articulate sounds, as human beings to express thoughts by words as as the organs may be so obstructed that a man may not be able to speak. Speaking is the productive skill in the oral mode. It like the other skills is more complicated than it seems at first and involves more than just pronouncing words.

Richards and Renandya state that effective oral communication requires the ability to use the language appropriately in social interactions that involves not only verbal communication but also paralinguistic elements of speech such as pitch, stress, and intonation. Moreover, nonlinguistic elements such as gestures, body language, and expressions are needed in conveying messages directly without any accompanying speech. Brown states that social contact in interactive

language functions is a key importance and in which it is not what you say that counts but how you say it what you convey with body language, gestures, eye contact, physical distance and other nonverbal messages. Speaking is one of the skills needed in learning a language. The form and meaning of speaking depends on the context, including speakers, listeners experiences, physical environment and the purpose of speaking.

Brown cites that when someone can speak a language it means that he can carry on a conversation reasonably competently. In addition, he states that the benchmark of successful acquisition of language is almost always the demonstration of an ability to accomplish pragmatic goals through an interactive discourse with other language speakers.

C. Second Language Acquisition

Second language acquisition refers to the process of language acquisition by a speaker who already has a knowledge of another language. Second-language acquisition (SLA), second-language learning, or L2 (language 2) acquisition, is the process by which people learn a second language. Second-language acquisition is also the scientific discipline devoted to studying that process. The field of second-language acquisition is a subdiscipline of applied linguistics, but also receives research attention from a variety of other disciplines, such as psychology and education.

D. Speaking Anxiety

Horwitz (2001:112) said —Anxiety is the subjective feeling of tension, apprehension, nervousness, and worry associated with an arousal of the autonomic nervous system. He has been found to interfere with many types of learning and it is only logical that this would also apply to second language learning. Next, Brown (2001:135) also claims —Anxiety is a psychological construct, commonly described by psychologists as a state of apprehension, a vague fear that is only indirectly associated with an object. Anxiety, as perceived intuitively by many language learners, negatively influences language learning and has been found to be one of the most highly examined variables in all of psychology and education.

Form of anxiety can show in various forms. Dixon in his book “Understanding Anxiety Problems”, There are several signs of anxiety that showed by anxiety symptoms involve in our body, mind, and behavior. The symptoms are:

1. Our body

Someone who feels anxious to face something is usually visible by the signs. Those signs are breathing becomes more rapid, heart beat speeds up, feel dizzy and light-headed, get “butterflies” in stomach, feel sick and need a toilet, the mouth becomes dry and it feels difficult to swallow, feel sweat more, and feel “jittery” or “jumpy”.

2. Our mind

When someone gets anxiety, they feel frightened, they may tell their selves that they are physically ill, having heart attack or a stroke or a going mad, think that people are looking at them, worry that they may lose control and make a fool of their selves in front of others, and feel that they must escape and get to a safe place.

3. Our behavior

When anxiety hits someone, they tend to make excuses to avoid going out or doing things and hurry out of places or situations where they feel anxious. “Anxiety is a psychological construct, commonly described by psychologists as a state of apprehension, a vague fear that is only indirectly associated with an object”. Anxiety, as perceived intuitively by many language learners, negatively influences language learning and has been found to be one of the most highly examined variables in all of psychology and education.

Anxiety is a complex psychological term covering many variables. In its simplest form, anxiety can be defined as “a general feeling of apprehension including hyper-vigilance, increased sympathetic nervous system activity, and difficulty concentrating”. Language anxiety plays a crucial role in foreign language learning. This notion has been pointed out in several studies revealing a negative correlation between high levels of anxiety and achievement in language learning.

Therefore, in this thesis anxiety can be concluded as a subjective feeling of tension, apprehension, nervousness, and worry associated with an arousal of the automatic nervous system. The academic literature has offered a somewhat confusing account of language anxiety. Researchers have been unable to draw a clear picture of how anxiety affects language learning and performance. Some researchers reported a negative relationship between language anxiety and achievement, e.g. the higher the anxiety, the lower the performance. Others reported no relationship, or a positive relationship more recently, Horwitz has reiterated that the issue of understanding the relationship between anxiety and achievement is unresolved.

In addition to the negative effects of anxiety on language learning and performance, anxiety has occasionally been found to facilitate language learning. Anxiety, in its debilitating and facilitating forms, serves simultaneously to motivate and to warn the learner. Facilitating anxiety “motivates the learner to “fight” the new learning task; it gears the learner emotionally for approach behavior”. Debilitating anxiety, in contrast “motivates the learner to “flee” the new learning task; it stimulates the individual emotionally to adopt avoidance behavior”. Anxiety is the subjective feeling of tension, apprehension, nervousness, and worry associated with an arousal of the autonomic nervous system.

The fact that anxiety plays an important role in learners’ learning a foreign language, yet, paying attention to the factors of learning should be taken into

consideration. Horwitz (2010: 46), believes that anxiety about speaking a certain language can affect students' performance. It can influence the quality of oral language production and makes individual appear less fluent than they really are. This explanation suggests that teacher may consciously create a communal and friendly atmosphere, and may also suggest the students take a proactive role in creating such an environment.

E. Types of Anxiety

Broadly speaking, anxiety can be divided into three types, Ellis (1994: 479-480) namely: trait anxiety, state anxiety and situation-specific anxiety. Drawing on work in general psychology defines;

1. Trait anxiety

Trait anxiety is as a more permanent predisposition to be anxious". It is best viewed as an aspect of personality. In addition, Pappamihel (2002, cited in Riasati, 2011: 908) states that trait anxiety is the tendency of a person to be nervous or feel anxious irrespective of the situation he/she is exposed to. Indeed, such anxiety is a part of a person's character and hence is permanent and difficult, if not impossible, to get rid of. A person who is trait anxious is likely to feel anxious in a variety of situation. Once the anxiety becomes a trait one, it will hinder language learning. Furthermore, this idea is likely to be relevant with what (Spielberger, 2010 cited in Kondo, 2009: 130) states that trait anxiety is defined as an individual tendency to be anxious in any situation.

2. State anxiety

State anxiety is as apprehension that is experience at the particular moment in time as a response to a definite situation (Spielberger, 2010). It is a combination of trait and situation specific anxiety. To follow Horwitz (2010) state anxiety is referred to a situational anxiety. As the name implies, this type of anxiety arises in a particular situation and hence is not permanent. It is nervousness or tension at the particular moment in response to some outside stimulus. It occurs because learners are exposed to a particular situation or event that is stressful to them.

3. Specific-situation anxiety

Specific-situation anxiety refers to the persistent and multifaceted nature of some anxieties (MacIntyre & Gardner, 1991: cited in 2001: 113). It is aroused by a specific type of situation or event such as public speaking, examinations, or class participation (Ellis, 1994: 480). On the other hand, (Spielberger, 2010) says that situation specific anxiety is defined as an individual tendency to be anxious in a particular time and situation. Situation specific anxiety can be seen as a subcategory of trait anxiety experienced at a given context. Thus, language anxiety can be included in situation specific anxiety.

F. Factors of Anxiety

Learning anxiety can be attributed into several factors. (Horwitz, 2010) argues that in the context of foreign language learning, learner may feel anxious due to problem related to three dimension of anxiety. Firstly, communication apprehension Secondly, fear of negative evaluation Thirdly, a general feeling of anxiety The description of these components will lay the foundation for the Indrianty: Students' anxiety concept of foreign language anxiety, providing an insight to comprehend the source of anxiety. As the focus in this study is on speaking skill, those components will be explained below:

1. Communication apprehension

Communication apprehension is a fear or anxiety about actual or anticipated communication with other individuals, and is a behavioral trait related to the psychological constructs of shyness and reticence (McCroskey, 2003). On the other hand, Horwitz et al (2010:128, cited in Tanver, 2007: 11) define communication apprehension as “a type of shyness characterized by fear or anxiety about communication with other people”. Relevant to the statement mention above, Tanver (2007:13) argues that communication apprehension may exist in most everyday communication situations, or may even be part of a general anxiety trait that arises in many facets of an individual's life and learners' personality traits such as shyness, quietness, and reticence are considered to frequently precipitate communication apprehension.

2. Fear of Negative Evaluation

Fear of negative evaluation is an extension of the second component of foreign language anxiety because it is not limited to test-taking situations; rather, it may occur in any social, evaluative situation, such as interviewing for a job or speaking in foreign language class (Horwitz et al., 2010: 127). It is also broader in the sense that it pertains not only to the teachers' evaluation of the students but also to the perceived reaction of other students as well (Tanveer, 2007: 14).

3. Test anxiety

An understanding test anxiety is also related to the discussion of foreign language anxiety. Test anxiety, as explained by Horwitz et al. (cited in Tanveer, 2007: 12) refers to a type of performance anxiety stemming from a fear of failure. Test anxiety is quite pervasive in language classroom because of its continuous performance evaluative nature. As test anxiety is treated differently when dealing with oral communication, the other two components can be focused on in examining the attitudes in English oral communication classroom.

CHAPTER III

RESEARCH METHOD

This chapter discusses the research method, research design, and approach which used in the study including research design, population and sample, research instrument, data collection procedure, and data analysis procedure.

A. Research Design

In this research, the researcher used quantitative approach. Quantitative is the data that from of number using statistic data. According to Ary, et.al (2010: 648) Quantitative research a ginnery employing operational definitions to generate numeric data to answer predator mined hypotheses or questions.

The type of research in this study is survey research. Survey research is a study that gathers data on the characteristics and views of informants about the nature of language or language learning through the use of oral interviews or written questionnaire. In survey research, investigators ask questions about peoples' beliefs, opinions, characteristics, and behavior. A survey researcher may want to investigate association between respondents' characteristics such as age, education, social class, race, and their current attitudes toward some issue. The data collections in this study were mostly in the form of description and explanation.

By the statements above, the researcher used survey research is a process of collecting information about the respondents of population. The

researcher described all of phenomena based on the facts in the field. In this case the researcher will use survey with quantitative design because the researcher measure, describe, identify and explain the types and factors of students' anxiety to speak English in English at SMAN 2 Palangka Raya. For this reason, the researcher will apply quantitative study as the research design.

B. Population

According to Ary, et al (2010, p. 148) population is defined as all members of any well-defined class of people, events, or objects. According to Borg, W. R & Gall, M.D in Muhammad Adnan Latthat (2008, p.10) target population in educational research usually is defined as all the members of a real or hypothetical set of people, events, or objects to which educational researchers wish to generalize the results of the research (Latief, 2014, p. 181). This population in this research are students in SMAN 2 Palangka Raya. The investigated population in this study is all of the students in SMAN 2 Palangka Raya.

Table 3.1
Population

| No | Class | Number of the students |
|-------|-------|------------------------|
| 1 | X | 519 |
| 2 | XI | 422 |
| 3 | XII | 462 |
| Total | | 1403 |

C. Sample

Sample is a portion of population. It is a small group of people that is observed. According to Ary, et al (2010, p.49) sample is a small group that is observed which is a portion of a population. Charles, C.M. state in Muhammad Adnan Latief (2009, p. 16) defines a sample as a small group of people selected to represent the much larger entire population from which it is down. There are three classes in the Language program, for this research, the students of Language program at SMAN 2 Palangka Raya will be as the sample, meanwhile the number of the samples are 74 students. The researcher used purposive sampling.

Table 3.2
Sample

| No | Class | Students |
|-------|--------------|----------|
| 1 | X Language | 24 |
| 2 | Xi Language | 24 |
| 3 | Xii Language | 27 |
| Total | | 74 |

D. Research Instrument

In this study the researcher used an instrument to help in collecting the data of research. According to Arikunto (2010) this research is a manner that is used to collect the data. The instrument used in this study is questionnaire.

1. Questionnaires

Questionnaire is one of the research instruments which consist of a

series of questions or statements to obtain the information from participants. In a questionnaire, the participants respond to the questions or statements by writing or marking an answer sheet (Fraenkel et al., 2011: p.125).

The first instrument used in this research were 43 items of questionnaire developed by Horwitz et al. (2010) called FLCAS (Foreign Language Classroom Anxiety Scale). FLCAS questionnaire used to gain the data from the respondents and to measure students' level of anxiety in language class. This close-ended questionnaire presented in form of Likert's scale, which is consist of 1-5 options of answer. This scale provided five responses ranging from "Strongly Agree (SA)", "Agree (A)", "Neither Agree nor Disagree (NA)", "Disagree (D)", and "Strongly Disagree (SD)".

Table 3.3
The Items Of Questionnaires Are Design To Survey

| Factors of Anxiety | Types of Anxiety | No. Items | Total |
|-----------------------------|----------------------------|--|----------|
| Communication Apprehension | Trait | 1, 4, 9, 14, 15, 18, 24, 27, 29, 30, 32, 36, 37, 38, | 14 items |
| Test Anxiety | Specific-situation anxiety | 3, 5, 6, 8, 10, 11, 12, 16, 17, 20, 21, 22, 25, 26, 28, 39, 43 | 17 items |
| Fear of Negative Evaluation | State | 2, 7, 13, 19, 23, 31, 33, 34, 35, 40, 41, 42 | 12 items |

| | |
|-------|----------|
| Total | 43 items |
|-------|----------|

For the questionnaire, that was not made by the researcher, but adapted by Horwitz et.al (2010). It is because the researcher claimed that if she take or use the present questionnaire, it as helpful, effective and efficient. Also, it is more valid and reliability. Without, start to make and examine the questionnaire to get the validity and reliability.

Table 3.4

Category of Measurment of Sudents Speaking Anxiety

| No | Score | Categorized |
|----|------------|-------------------|
| 1 | 80%-100% | Strongly Agree |
| 2 | 60%-79.99% | Agree |
| 3 | 40%-59.99% | Neutral |
| 4 | 20%-39.99% | Disagree |
| 5 | 0%-19.99% | Strongly Disagree |

2. Validity

Sugiyono (2004, p. 267) has expressed a similar view validity instrument it means the instrumen that used to get the data (measure) is valid. Valid it means the instrument can be used to measure what were we want to measure. Based on Sugiyono, the result of the study is called

valid if there was a similarities between the data that have collected by the tests and the true data that happened on the object of the study.

The used three validities to know the instrument validity of the study, they are faced with validity, content validity and construct validity. A good test should posses' validity, that is it should measure what it is intended to measure and nothing else. Ary (2010, p. 196) discovered that validity is the extent to which a measure actually taps the underlying concept that its purpose to measure. In this study, the validity is classified into face, content and construct.

a. Face Validity

According to Ary et al (2010, p. 196) state that this is a subjective judgment on the degree to which a test appears to measure the knowledge or abilities it claims to measure, based on the subjective judgment of an observer. Specifically, in this study to know the anxiety students' in speaking English at language class in SMAN 2 Palangka Raya.

b. Content Validy

Ary (2010, p. 214) has drawn attention to the fact that content validity is essentially and of necessity based on the judgment, and such judgment must be made separately for each situation. The question of an instrument's validity is always specific to the particular situation and to the particular prupose for which it is being

used. A questionnaire that has validity in one situation may not be valid in a different situation.

3. Realibility

According to Singarimbun in Tanzeh (2009: 55) reliability is an index that shows the extent to which the device is used to measure the same phenomenon twice and the measurement results obtained are relatively consistent, they are called reliable. In sequence, reliability shows consistency in measuring the same phenomenon. In this test, the study analyzed the moments of Pearson products using Pearson correlation. For SPSS version 20, correlation analysis is used.

E. Data Collecting Procedure

In this study a questionnaire is used to collect data. The steps are as follows:

1. The researcher prepared a questionnaire. The questionnaire adapted from Horwitz, and Cope (2010)
2. The researcher chose ite of research. The location is at SMAN 2 Palangka Raya
3. The researcher asked for permission with the teacher
4. The researcher gave the questionnaire for the students
5. The researcher interviewed for to all the samples
6. The researcher calculated the results of the response

7. The researcher clear analyzed the data obtained using SPSS version 20
8. The researcher interpreted the results of the data

F. Data Analysis Procedure

Sugiyono (2014 p. 147) argued that in quantitative research, data analysis is an activity after data from all respondents or other data sources are collected. Data analysis is needed to answer the research questions. Based on this study the researcher will use a quantitative descriptive. To analyze the data, the steps applied as follow:

1. Collecting the main data (item score/responses)
2. Arranging the collected score into the distribution of frequency of the score table.
3. Calculating Mean using formula, Median, and Modus.
 - a. Mean

$$\bar{X} = \frac{\sum X}{n}$$

Where:

X = Mean value

Σ = Sum of

X = raw score

n = Number of case.

b. Median

The median is defined as that point in a distribution of measure which 50 percent of the cases lay'.

c. The Modus / Mode

The mode is the value in a distribution that occurs most frequently

4. Calculating the deviation score and standard deviation using the formula:

a. Deviation Score

$$x = X - \bar{X}$$

x = Deviation Score

X = raw score

\bar{X} = Mean

b. Standard Deviation

$$s^2 = \frac{\sum x^2}{N-1}$$

$$s = \sqrt{\frac{\sum x^2}{N-1}}$$

$$s = \sqrt{\frac{\sum X^2 - \frac{(\sum X)^2}{N}}{N-1}}$$

Where

$\sum x^2$ = sum of the squares of each score (i.e., each score is first squared, and then these squares are summed)

$X)^2$ = sum of the score squared (the scores are first summed, and then this total is squared)

N = Number of cases

5. Interpreting the analysis result.
6. Giving conclusion.

CHAPTER IV

RESEARCH FINDINGS AND DISCUSSION

In this chapter the researcher showed the result of the study and discussion. The finding to answer the research problem is questionnaire.

A. Data Presentation

1. Types of Students' Anxiety

a. Trait Anxiety

The data presentation show about the calculation of the questionnaire result of this research. The trait anxiety data result is shown in the table below:

Table 4.1
Trait Anxiety Data Presentation

| Item Number | Frequency and Percent | Scale | | | | | Total |
|-------------|-----------------------|----------|---------|---------|---------|----------|-------|
| | | SA =5 | A =4 | N =3 | D =2 | SD =1 | |
| 1 | Frequency | 2 | 26 | 22 | 13 | 4 | 49 |
| | Percent | 3.0 | 38.8 | 32.8 | 19.4 | 6.0 | 100 |

| | | | | | | | |
|----|-----------|------|------|------|------|------|-----|
| 4 | Frequency | 5 | 20 | 16 | 15 | 11 | 45 |
| | Percent | 7.5 | 29.9 | 23.9 | 22.2 | 16.4 | 100 |
| 9 | Frequency | 13 | 24 | 16 | 8 | 6 | 52 |
| | Percent | 19.4 | 35.8 | 23.9 | 11.9 | 9.0 | 100 |
| 14 | Frequency | 6 | 17 | 23 | 16 | 5 | 48 |
| | Percent | 9.0 | 25.4 | 34.3 | 23.9 | 7.5 | 100 |
| 15 | Frequency | 3 | 3 | 25 | 25 | 11 | 38 |
| | Percent | 4.5 | 4.5 | 37.3 | 37.3 | 16.4 | 100 |
| 18 | Frequency | 4 | 18 | 29 | 9 | 7 | 48 |
| | Percent | 6.0 | 26.9 | 43.3 | 13.4 | 10.4 | 100 |
| 24 | Frequency | 5 | 16 | 26 | 11 | 9 | 47 |
| | Percent | 7.5 | 23.9 | 38.8 | 16.4 | 13.4 | 100 |
| 27 | Frequency | 3 | 21 | 31 | 7 | 5 | 50 |
| | Percent | 7.5 | 10.4 | 46.3 | 31.3 | 4.5 | 100 |
| 29 | Frequency | 5 | 16 | 22 | 18 | 6 | 46 |
| | Percent | 7.5 | 23.9 | 32.8 | 26.9 | 9.0 | 100 |

| | | | | | | | |
|----|-----------|------|------|------|------|------|-----|
| 30 | Frequency | 3 | 9 | 22 | 24 | 9 | 40 |
| | Percent | 4.5 | 13.4 | 32.8 | 35.8 | 13.4 | 100 |
| 32 | Frequency | 4 | 25 | 26 | 9 | 3 | 50 |
| | Percent | 6.0 | 37.3 | 38.8 | 13.4 | 4.5 | 100 |
| 36 | Frequency | 12 | 22 | 24 | 4 | 5 | 53 |
| | Percent | 17.9 | 32.8 | 35.8 | 6.0 | 7.5 | 100 |
| 37 | Frequency | 1 | 12 | 23 | 25 | 6 | 40 |
| | Percent | 1.5 | 17.9 | 34.3 | 37.3 | 9.0 | 100 |
| 38 | Frequency | 11 | 20 | 23 | 8 | 5 | 51 |
| | Percent | 16.4 | 29.9 | 34.3 | 11.9 | 7.5 | 100 |

$$\begin{aligned}
 \text{Result for trait anxiety} &= \frac{\text{Total Score}}{\text{Total Item}} \\
 &= \frac{677}{14} \\
 &= 47 \text{ (Neutral)}
 \end{aligned}$$

b. Specific Situation Anxiety

The data presentation show about the calculation of the questionnaire result of this research. The specific situation anxiety data result in the table below:

Table 4.2

Specific Situation Anxiety Data Presentation

| Item Number | Frequency and Percent | Scale | | | | | Total |
|-------------|-----------------------|----------|---------|---------|---------|----------|-------|
| | | SA =5 | A =4 | N =3 | D =2 | SD =1 | |
| 3 | Frequency | 8 | 15 | 17 | 18 | 9 | 45 |
| | Percent | 11.9 | 22.4 | 25.4 | 26.9 | 13.4 | 100 |
| 5 | Frequency | 13 | 30 | 17 | 4 | 3 | 58 |
| | Percent | 19.4 | 44.8 | 25.4 | 6.0 | 4.5 | 100 |
| 6 | Frequency | 3 | 8 | 14 | 26 | 16 | 37 |

B. Result of the Research

The researcher calculated the data frequency, percentage, valid and cumulative percentage of the item using SPSS version 20.2 program.

Based on the explanation above, the result of questioner can be seen as follow.

Tabel 4.4
Result item 1

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------|-------------------|-----------|---------|---------------|--------------------|
| Valid | Strongly Disagree | 4 | 6.0 | 6.0 | 6.0 |
| | Disagree | 13 | 19.4 | 19.4 | 25.4 |
| | Neither | 22 | 32.8 | 32.8 | 58.2 |
| | Agree | 26 | 38.8 | 38.8 | 97.0 |
| | Strongly Agree | 2 | 3.0 | 3.0 | 100.0 |
| | Total | 67 | 100.0 | 100.0 | |

Item 1, I never feel quite sure of myself when I am speaking in my foreign language class. There were 67 total students, 2 students (3,0%) strongly agree, 26 students (38,8 %) agree, 22 students (32.8%) neither, 13 students (19.4%) disagree and 4 students (6,0%) strongly disagree. Most of the students choose “Agree” option, it is 38,8% , it means that they feel anxious in order to speak English.

Tabel 4.5
Result item 2

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------|-------------------|-----------|---------|---------------|--------------------|
| Valid | Strongly Disagree | 15 | 22.4 | 22.4 | 22.4 |
| | Disagree | 21 | 31.3 | 31.3 | 53.7 |
| | Neither | 13 | 19.4 | 19.4 | 73.1 |
| | Agree | 10 | 14.9 | 14.9 | 88.1 |
| | Strongly Agree | 8 | 11.9 | 11.9 | 100.0 |
| | Total | 67 | 100.0 | 100.0 | |

Item 2, I don't worry about taking mistakes in language class. There were 67 total students, 8 students (11,9%) strongly agree, 10 students (14,9%) agree, 13

students (19,4) neither, 21 students (31,3% disagree), 15 students (22,4%) strongly disagree. Most of the students choose “Disagree” option, it is 31,3%, it means that they are worry making a mistakes in language class.

Tabel 4.6
Result item 3

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------|-------------------|-----------|---------|---------------|--------------------|
| Valid | Strongly Disagree | 9 | 13.4 | 13.4 | 13.4 |
| | Disagree | 18 | 26.9 | 26.9 | 40.3 |
| | Neither | 17 | 25.4 | 25.4 | 65.7 |
| | Agree | 15 | 22.4 | 22.4 | 88.1 |
| | Strongly Agree | 8 | 11.9 | 11.9 | 100.0 |
| | Total | 67 | 100.0 | 100.0 | |

Items 3, I tremble when I know that I'm going to be called on in language class.

There were 67 total students, 8 students (11,9%) strongly agree, 15 students (22,4%) agree, 17 students (25,4%) neither, 18 students (26,9%) disagree, 9 students (13,4%) strongly disagree. Most of the students choose “Disagree” option, it is 26,9%, it means that they not feel anxious when they called to speak English.

Tabel 4.7
Result item 4

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------|-------------------|-----------|---------|---------------|--------------------|
| Valid | Strongly Disagree | 11 | 16.4 | 16.4 | 16.4 |
| | Disagree | 15 | 22.4 | 22.4 | 38.8 |

| | | | | |
|----------------|----|-------|-------|-------|
| Neither | 16 | 23.9 | 23.9 | 62.7 |
| Agree | 20 | 29.9 | 29.9 | 92.5 |
| Strongly Agree | 5 | 7.5 | 7.5 | 100.0 |
| Total | 67 | 100.0 | 100.0 | |

Item 4, It frightens me when I don't understand what the teacher is saying in the foreign language. There were 67 total students, 5 students (7,5%) strongly agree, 20 students (29,9%) agree, 16 students (23,9%) neither, 15 students (22,2%) disagree, 11 students (16,4%) strongly disagree. Most of the students choose “Agree” option, it is 29,9% it means that they show their anxiety in misunderstanding the teacher said in English.

Tabel 4.8
Result item 5

| | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------------------------|-----------|---------|---------------|--------------------|
| Valid Strongly Disagree | 3 | 4.5 | 4.5 | 4.5 |
| Disagree | 4 | 6.0 | 6.0 | 10.4 |
| Neither | 17 | 25.4 | 25.4 | 35.8 |
| Agree | 30 | 44.8 | 44.8 | 80.6 |
| Strongly Agree | 13 | 19.4 | 19.4 | 100.0 |
| Total | 67 | 100.0 | 100.0 | |

Item 5, It wouldn't bother me at all to take more foreign language classes. There were 67 students, 13 students (19,4%) strongly agree, 30 students (44,8%) agree, 17 students (25,4%) neither, 4 students (6,0%) disagree, 3 students (4,5%) strongly disagree. Most of the students choose “Agree” option, it is 44,8% it means that the students do not feel annoying to take other class in

learning foreign language.

Tabel 4.9
Result item 6

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------|-------------------|-----------|---------|---------------|-----------------------|
| Valid | Strongly Disagree | 16 | 23.9 | 23.9 | 23.9 |
| | Disagree | 26 | 38.8 | 38.8 | 62.7 |
| | Neither | 14 | 20.9 | 20.9 | 83.6 |
| | Agree | 8 | 11.9 | 11.9 | 95.5 |
| | Strongly Agree | 3 | 4.5 | 4.5 | 100.0 |
| | Total | 67 | 100.0 | 100.0 | |

Item 6, During language class, I find myself thinking about things that have nothing to do with the course. There were 67 students, 3 students (4,5%) strongly agree, 8 students (11,9%) agree, 14 students (20,9) neither, 26 students (38,8) disagree, 16 students (23,9%) strongly disagree. Most of the students choose “Disagree” option, it is 38,8% it means that the students give negative response for the statement.

Tabel 4.10
Result item 7

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------|-------------------|-----------|---------|---------------|--------------------|
| Valid | Strongly Disagree | 2 | 3.0 | 3.0 | 3.0 |
| | Disagree | 9 | 13.4 | 13.4 | 16.4 |
| | Neither | 20 | 29.9 | 29.9 | 46.3 |
| | Agree | 25 | 37.3 | 37.3 | 83.6 |
| | Strongly Agree | 11 | 16.4 | 16.4 | 100.0 |
| | Total | 67 | 100.0 | 100.0 | |

Item 7, I keep thinking that the other students are better at languages than I am.

There were 67 students, 11 students (16,4%) strongly agree, 25 students (37,3%) agree, 20 students (29,9%) neither, 9 students (13,4%) disagree, 2 students (3,0%) strongly disagree. Most of the students choose “Agree” option, it is 37,3% it means that the students admitted they keep thinking that their friends are better than himself.

Tabel 4.11
Result item 8

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------|-------------------|-----------|---------|---------------|--------------------|
| Valid | Strongly Disagree | 4 | 6.0 | 6.0 | 6.0 |
| | Disagree | 8 | 11.9 | 11.9 | 17.9 |

| | | | | |
|----------------|----|-------|-------|-------|
| Neither | 31 | 46.3 | 46.3 | 64.2 |
| Agree | 20 | 29.9 | 29.9 | 94.0 |
| Strongly Agree | 4 | 6.0 | 6.0 | 100.0 |
| Total | 67 | 100.0 | 100.0 | |

Item 8, I am usually at ease during tests in my language class. There were 67 students, 4 students (6,0%) strongly agree, 20 students (29,9%) agree, 31 students (46,3%) neither, 8 students (11,9%) disagree, 4 students (6,0%) strongly disagree. Most of the students choose “Neither” option, it is 46,3% it means that neutral.

Tabel 4.12
Result item 9

| | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------------------------|-----------|---------|---------------|--------------------|
| Valid Strongly Disagree | 6 | 9.0 | 9.0 | 9.0 |
| Disagree | 8 | 11.9 | 11.9 | 20.9 |
| Neither | 16 | 23.9 | 23.9 | 44.8 |
| Agree | 24 | 35.8 | 35.8 | 80.6 |
| Strongly Agree | 13 | 19.4 | 19.4 | 100.0 |
| Total | 67 | 100.0 | 100.0 | |

Item 9, I start to panic when I have to speak without preparation in language class. There were 67 students, 13 students (19,4%) strongly agree, 24 students (35,8%) agree, 16 students (23,9%) neither, 8 students (11,9%) disagree, 6 students (9,0%) strongly disagree. Most of the students choose “Neither” option, it is 23,9% it means that neutral.

Tabel 4.13
Result item 10

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------|-------------------|-----------|---------|---------------|--------------------|
| Valid | Strongly Disagree | 6 | 9.0 | 9.0 | 9.0 |
| | Disagree | 8 | 11.9 | 11.9 | 20.9 |
| | Neither | 8 | 11.9 | 11.9 | 32.8 |
| | Agree | 33 | 49.3 | 49.3 | 82.1 |
| | Strongly Agree | 12 | 17.9 | 17.9 | 100.0 |
| | Total | 67 | 100.0 | 100.0 | |

Item 10, I worry about the consequences of failing my foreign language class.

There were 67 students, 12 students (17,9%) strongly agree, 33 students (49,3%) agree, 8 students (11,9%) neither, 8 students (11,9%) disagree, 6 students (9,0%) strongly disagree. Most of the students choose “Agree” option, it is 49,3% it means that the students agree about consequences of failing in foreign language class.

Tabel 4.14
Result item 11

| | | Frequency | Percent | Valid Percent | Cumulative Percent |
|-------|-------------------|-----------|---------|---------------|--------------------|
| Valid | Strongly Disagree | 2 | 3.0 | 3.0 | 3.0 |
| | Disagree | 17 | 25.4 | 25.4 | 28.4 |

C. Discussion

In this section, the researcher discusses the result of questionnaire. The questionnaire was adapted from Horwitz. Results of research on learning speaking English at school are obtained using a questionnaire as the main instrument for collecting data. The

data presented consisted of responses, central tendencies (mean, median and mode) and standard deviations. There are 67 students from 3 classes in the year 2019-2020 with common majors.

The researcher concludes that the majority of the students at SMAN 2 Palangka Raya had type of speaking anxiety which was state anxiety. While the average results from the questionnaire that given by researcher stated that they tended to be neutral, which categorized at 47% the facts on the ground showed that they felt nervous when speaking English in the class, it states that they had anxiety. State anxiety is the anxious type which often occurs when someone gives response to some outside stimulus or reactions. Based on the score, it is categorized as neutral (50%), same of the students also feel anxious in particular time and situation, where it is belonged to specific situation anxiety which categorized as neutral (47%). The response will lead them to nervousness, tensions and hesitations. Then few of them had trait anxiety, which also categorized as neutral (47%).

The reason of researcher categorized them into state anxiety can be seen from the questionnaire result, at 50%. The questionnaire result also showed that they had state anxiety. The majority of them answered 'strongly agree' or 'agree' in the type of statements that indicated state anxiety, such as afraid of incorrect grammatical rule, incorrect vocabularies, fear of forgetting what they would say while

speaking, fear of judgment from other students, and fear of negative comment or sudden correction from the teacher. It is similar to Horwitz's theory which mentions that it is nervousness or tension at the particular moment in response to some outside stimulus. It occurs because learners are exposed to a particular situation or event that is stressful to them. By those answers, we can conclude that most of them worried about other reactions about their speaking ability. And for the previous study it is different with Tanveer's findings that language anxiety can originate from learners' own sense of self, their related cognitions, language learning difficulties, differences in learners' and target language cultures, differences in social status of the speakers and interlocutors and from the fear of losing self identity.

By that result, we can conclude that most of them worried about other reactions about their speaking ability. Questionnaire result showed that they rarely practiced their speaking. Most of them did not train and improve their speaking.

CHAPTER V

CONCLUSION AND SUGGESTION

In this chapter consists of the conclusion and suggestion of the study. The researcher explains the conclusion of the study and some suggestion in order to the future researcher better than this study.

A. Conclusion

According to findings in this study, questionnaire is one of tool learning to get a result shown that students at SMAN 2 Palangka Raya in language major they often feel anxiety when they practice their English in front of class either daily school activity.

After analyzing the data, the result showed that most of the students admitted that they were getting neutral anxious in speaking English. The percentage of students' response was 47%. Based on the result, as can be seen the type of the students' anxiety in speaking English is state anxiety they were getting anxious in fear of negative evaluation (50%). For type of the specific situation anxiety they were getting anxious in test anxiety (47%). And for the type of trait anxiety they were getting communications apprehension. The factors of the students' anxiety in speaking English. It was seen from the percentage of students' response in every statement in the questionnaire. The factors of the anxiety influence their achievement in speaking skill. Based on the result, we can see the factor of the students' anxiety in speaking English. It was seen from the percentage of students' response in every statement in the questionnaire. The highest percentage is state anxiety for the type anxiety and fear of negative evaluation for factor

anxiety.

B. Suggestion

Based on the result, it is implied that most of the students experienced anxious in every types of anxiety. They get anxious in feeling worry, feeling nervous, worrying about negative evaluation from their friends, not talk fluently in speaking. According to the findings above the researcher consider that the researcher has an important suggestion for who involved in this research.

First for all students one day you will surely realize how important English is in the future, make sure you prepare yourself by honing your English language skills to make it easier and smooth your way to reach your goals.

Second for English teacher, hopefully from this reasearch, the teacher can see what must be done about this phenomenon. The researcher hoped to give a contribution to English teacher in teaching learning speaking English in the class.

Last for next researcher in this research was specialized to identify the anxiety factor of students in speaking skill. Hence, it is suggested for the next researcher to conduct a study in investigating the factor of students' anxiety in other skill of English learning, such as writing, reading, and listening. It is also suggested for the researcher to do the study by using other kinds of research method to obtain accurate result. For instance, the

research which is related with the anxiety can be done by using quantitative research.
