

CHAPTER V

CLOSING

This chapter presents conclusion and suggestion which are derived from result of the study in the previous chapter.

A. Conclusion

Based on result of the study, the writer concludes that the alternative hypothesis (H_a) is accepted and null hypothesis (H_o) is rejected. It can be seen from the coefficient of " r_{ch} " = -0.092. It means that between voluntary reading and spelling ability of fifth semester English department students of STAIN Palangka Raya has very low correlation. Then, the correlation is negative. It means that the more fifth semester English department students read voluntarily does not give an impact in increasing their spelling ability. But if it was compared to r table at significant level 5 % based on the calculation degree of freedom, the significant value = 0.325. It means that " r_{ch} " = -0.092 is smaller than r table so it can be concluded that the correlation between voluntary reading and spelling ability of fifth semester English department students of STAIN Palangka Raya is weak yet insignificant.

According to the explanation above, it can be inferred that the more fifth semester English department students read voluntarily does not give an impact in increasing their spelling ability.

B. Suggestion

Based on conclusion of the study above, there are some suggestions that can be considered in the following:

The students should practice spelling because it is important in learning English. Reading is one of the ways that can be used to enhance spelling. The students also have to look for another ways to support their spelling learning, such as listening to English word, expression or conversation and practicing it both orally and written.

For the lecturer, they can use another method in teaching English such as intensive reading because the number of students who likes to read is limited. But it does not suggest that focused approaches to specific strategies for extensive reading ought to be abandoned. And it is suggested that the material used in instructional is internet material because based on the data the students have a tendency in reading internet material.

In this thesis, the writer realized that design of the study was very simple. There are still many weaknesses that could be seen. Therefore, for further researcher is expected can improve this study with another ways such as with different design or instrument. In other word, the other researcher can use this research as the reference for conducting their research.
