## CHAPTER IV

## RESULT OF THE STUDY

This chapter discusses the data which had been collected from the research in the field of study. The data were the result of experiment and control class, the result of post-test experiment and control class, and the result of data analysis.

## A. Description of the Data

## 1. The result of Pre-Test score of the Experiment Groups and Control Group

The Pre-Test was conducted to the first experiment group (Self-Correct) in XI IPS 3 room on august $11^{\text {th }}$, 2014, at $07.45-09.15 \mathrm{am}$., and followed by second experiment group (Self-Repair) in XI IPS 2 room at 10.15-11.45 am. Then the control group was given Pre-Test in XI IPS 1 room on august 12th, 2014, at 10.15-11.45 am. The Pre-test scores of the groups were presented in Table 4.1.

Table 4.1. Students' Final Score of Pre Test

|  | Experiment Group <br> (Self Correct) XI IPS <br> 3 |  | Experiment Group <br> (Self Repair) <br> XI IPS 2 |  | Control Group XI <br> IPS1 |  |

| 29 | SC29 | 55.56 | SR29 | 52.78 | C29 | 52.78 |
| 30 | SC30 | 58.33 | SR30 | 52.78 | - | - |
| Sum |  | 1705.56 | - | 16667.67 | - | 16667.67 |
| Lowest score |  | 47.22 | - | 50.00 | - | 50.00 |
| Highest score |  | 69.44 | - | 66.67 | - | 66.67 |
| Mean |  | 56.85 | - | 55.56 | - | 57.47 |
| Standard deviation |  | 5.73 | - | 4.13 | - | 3.86 |

To find the Sum, the Lowest Score, Highest Score, Mean, and the Standard Deviation, researcher used manual calculation and SPSS 17.0.

According to the table of the students' pre-tests scores, the first experiment group (Self-Correct) had the lowest score was 47.22 ; the highest score
was 69.444 ; the mean was 56.85 ; with the standard deviation was 5,73 . The second experiment group (Self-Repair) had the lowest score was 50.00; the highest score was 66,67 ; the mean was 55,56 ; with the standard deviation was 4,13. The Control group had the sum of the data was 1666.67 ; the lowest score was 50.00 , the highest score was 66.67 ; the mean was 57.47 ; with the standard deviation was 3.86.

## 2. The result of Post-Test score of the Experiment Groups and Control

## Group

The Post-Test was conducted to the first experiment group (SelfCorrect) in XI IPS 3 room on September ${ }^{\text {st }}$, 2014, at 10.15-11-45 am., second experiment group (Self-Repair) in XI IPS 2 room at 07.45-09.15 am., then followed by the control group in XI IPS 1 room at 12.00-13.30 am. The post-test scores of the groups were presented in Table 4.2.

Table 4.2. Students' Final Score of Post Test

| 30 | SC30 | 69.44 | SR30 | 72.22 | - | - |
| Sum |  | 2238.89 | - | 2144.45 | - | 1913.89 |
| Lowest score |  | 58.33 | - | 58.33 | - | 52.77 |
| Highest score |  | 83.33 | - | 80.56 | - | 86.11 |
| Mean |  | 74.63 | - | 71.48 | - | 66.99 |
| Standard deviation |  | 7.18 | - | 6,36 | - | 7.56 |

To find Lowest Score, Highest Score, Mean, and the Standard Deviation, researcher used manual calculation and SPSS 17.0.

According to the table of the students' post-tests scores, the first experiment group (Self-Correct) had the lowest score was 58.33; the highest score was 83.33 ; the mean was 74.62 ; with the standard deviation was 7.18 . The second experiment group (Self-Repair) had the lowest score was 58.33; the highest score
was 80.56 ; the mean was 71,48 ; with the standard deviation was 6.36 . The Control group had the lowest score was 52.77; the highest score was 86.11 ; the mean was 65.99 ; with the standard deviation was 7.56 .

## 3. Comparison Result of Pre-Test and Post- Test Score of Experiment <br> Groups

a. The Comparasion of Pre-Test and Post-Test Scores in Self-Correct

## Group

The comparasion between students' pre-test and post-test after doing the experiment can be seen in the following Table 4.3.

Table 4.3. The Comparasion of Pre-Test and Post-Test Scores in Self-Correct

## Group

| No | Subject | Pre-Test | Post-Test | Improvement |
| :---: | :---: | :---: | :---: | :---: |
| 1 | SC1 | 55.56 | 80.56 | 25.00 |

| 18 | SR18 | 55.56 | 69.44 | 13.89 |
| 19 | SR19 | 55.56 | 66.67 | 11.11 |
| 20 | SR20 | 50.00 | 66.67 | 16.67 |
| 21 | SR21 | 61.11 | 80.56 | 19.45 |
| 22 | SR22 | 55.56 | 66.67 | 11.11 |
| 23 | SR23 | 58.33 | 77.78 | 19.45 |
| 24 | SR24 | 55.56 | 72.22 | 16.67 |
| 25 | SR25 | 63.89 | 80.56 | 16.67 |
| 26 | SR26 | 66.67 | 77.78 | 11.11 |
| 27 | SR27 | 52.78 | 72.22 | 19.44 |
| 28 | SR28 | 61.11 | 77,78 | 16.67 |
| 29 | SR29 | 52.78 | 58.33 | 5.56 |
| 30 | SR30 | 52.78 | 72.22 | 19.44 |
| Sum |  | 1666.67 | 2144.45 | - |
| Lowest score |  | 50.00 | 58.33 | - |
| Highest score |  | 66.67 | 80.56 | - |
| Mean |  | 55.56 | 71.48 | - |
| Standard deviation |  | 4.13 | 6.36 | - |

## B. Testing Normality and Homogeinity

## 1. Normality Test

In this study, researcher used One-Sample Kolmogorov-Smirnov Test to test the normality.
1.a. Experiment Group (Self-Correct)

Table 4.5. The Normality Test of Experiment Group (Self-Correct)
One-Sample Kolmogorov-Smirnov Test

|  |  | Self-Correct |
| :--- | :--- | ---: |
| N |  | 30 |
| Normal Parameters ${ }^{\text {a,b }}$ | Mean | 74.63 |
|  | Std. Deviation | 7.18 |
| Most Extreme Differences Absolute | .15 |  |
| Positive | .11 |  |
|  | Negative | -.15 |
| Kolmogorov-Smirnov Z |  | .84 |
| Asymp. Sig. (2-tailed) |  | .48 |

Based on the calculation used SPSS 17 program, the normality of experiment group (self-Correct) was 0.48 . The normality of the class was consulted with ${ }_{\chi}$ table of Kolmogorov- Smirnov with the level of significance 5\% or ${ }_{\chi}$ table $=0.05$. From the table above showed that the ${ }_{\chi}$ experiment was higher than ${ }_{\chi}$ table $(0.48 \geq 0.05)$, so the data was in normal distribution.
1.b. Experiment Group (Self-Repair)

Table 4.6. The Normality Test of Experiment Group (Self-Repair)
One-Sample Kolmogorov-Smirnov Test

|  |  | Self-Repair |
| :--- | :--- | ---: |
| N |  | 30 |
| Normal Parameters ${ }^{\text {a,b }}$ | Mean | 71.48 |
|  | Std. Deviation | 6.36 |
| Most Extreme Differences Absolute | .11 |  |
|  | Positive | .09 |
|  | Negative | -.11 |
| Kolmogorov-Smirnov Z |  | .62 |
| Asymp. Sig. (2-tailed) | .84 |  |

Based on the calculation used SPSS 17 program, the normality of experiment group (self-Repair) was 0.84 . The normality of the class was consulted with ${ }_{\chi}$ table of Kolmogorov- Smirnov with the level of significance 5\% or ${ }_{\chi}$ table $=0.05$. From the table above showed that the ${ }_{\chi}$ experiment was higher than ${ }_{\chi}$ table ( $0.84 \geq 0.05$ ), so the data was in normal distribution.
1.c. Control Group

Table 4.7. The Normality Test of Control Group
One-Sample Kolmogorov-Smirnov Test

|  |  | Control Group |
| :--- | :--- | ---: |
| N |  | 29 |
| Normal Parameters ${ }^{\mathrm{a}, \mathrm{b}}$ | Mean | 65.99 |
|  | Std. Deviation | 7.56 |
| Most Extreme Differences Absolute | .22 |  |
| Positive | .22 |  |
|  | Negative | -.12 |
| Kolmogorov-Smirnov Z |  | 1.20 |
| Asymp. Sig. (2-tailed) |  | .11 |

Based on the calculation used SPSS 17 program, the normality of Control Group was 0.11 . The normality of the class was consulted with ${ }_{\chi}$ table of Kolmogorov- Smirnov with the level of significance $5 \%$ or ${ }_{\chi}$ table $=0.05$. From the table above showed that the ${ }_{\chi}$ experiment was higher than ${ }_{\chi}$ table $(0.11 \geq 0.05)$, so the data was normal in distribution.

## 2. Homogeinity Test

Levene Test Statistic was used to know the homogeinity of variance.

Table 4.8. The homogeinity Test of Variances
Test of Homogeneity of Variances

| Levene Statistic | df1 | df2 | Sig. |
| :--- | :--- | :--- | :--- |
| .08 | 2 | 86 | .92 |

Based on the calculating used SPPS 17.0 program, the data showed the significancy was 0.92 . The singnificant of the levene test statistic was higher than $0.05(0.92 \geq 0.05)$. It meant that the scores were not violated the homogeinity.

## C. Testing Hypothesis

The problems of the study were to measure the effect of teacher's corrective feedback using self-correct and self-repair, and to measure the significant difference between both methods on students' speaking score. To answer the problems, researcher used One- Way Anova calculation. The criteria of $H_{0}$ is accepted when $F_{\text {value }} \leq F_{\text {table }}$, and the $H_{o}$ is refused when $F_{\text {value }} \geq F_{\text {table }}$. Then the criteria $H_{a}$ is accepted when $F_{\text {value }} \geq F_{\text {table, }}$, and $H_{a}$ is refused when $F_{\text {value }}$ $\leq \mathrm{F}_{\text {table. }}$. Or The criteria of $\mathrm{H}_{0}$ was accepted when the significant value $\geq 0.05$, and $\mathrm{H}_{0}$ was refused when the significant value $\leq 0.05$.
a. One-Way ANOVA Manual Calculation

To answer the problems, researcher used One- Way Anova manual calculation. The researcher calculated:

1. Degree of Freedom Between Groups (DFb) and Within Groups (DFw)
$\mathrm{DFb} \quad=\mathrm{K}-1=3-1=2$
$\mathrm{DFb}=2$
DFw $=\mathrm{N}-\mathrm{K}=89-3=86$

DFw $=86$

Ftable = 3.11
2. Average of $X_{1}, X_{2}$, and $X_{3}$.

Average $\mathrm{X}_{1}=$ Average of $\mathrm{X}_{1}$ (Self-Correct Scores)
Average $X_{1}=\mathbf{7 4 . 6 3}$
Average $\mathrm{X}_{2}=$ Average of $\mathrm{X}_{2}$ (Self-Repair Scores)
Average $\mathrm{X}_{2}=\mathbf{7 1 . 4 8}$
Average $\mathrm{X}_{3}=$ Average of $\mathrm{X}_{3}$ (Control Group Scores)
Average $X_{3}=\mathbf{6 5 . 9 9}$
3. Grand Mean/Total (GM)
$\mathrm{GM}=\frac{X 1+X 2+X 3}{N}=\frac{6277.22}{89}$
$\mathrm{GM}=\mathbf{7 0 . 7 6}$
4. Sum of Total Squares (SSt)

SSt $=\sum(X-G M)^{2}=(X 1-G M)^{2}+(X 2-G M)^{2}+(X 3-G M)^{2}$
SSt = $\mathbf{5 3 8 7 . 2 3}$
5. Sum of Squares Within Group (SSw)
$\mathrm{SSw}=\sum(X 1-\text { Average } X 1)^{2}+(X 2-\text { Avegarge } X 2)^{2}+(X 3-$
Average X3) ${ }^{3}$
$\mathrm{SSw}=\mathbf{4 2 6 4 . 9 8}$
6. Sum of Squares Between Group (SSb)
$\mathrm{SSb}=S S t-S S w$
$\mathrm{SSb}=5387.23-4264.3$
$\mathrm{SSb}=\mathbf{1 1 2 2 . 6 3}$
7. Mean Square Between Group (MSb)

$$
\begin{aligned}
& \mathrm{MSb}=\frac{S S b}{D F b} \\
& \mathrm{MSb}=\frac{1122.63}{2} \\
& \mathrm{MSb}=\mathbf{5 6 1 . 4 7}
\end{aligned}
$$

8. Mean Square Within Group (MSw)

$$
\begin{aligned}
& \mathrm{MSw}=\frac{S S \mathrm{w}}{D F w} \\
& \mathrm{MSw}=\frac{4264.93}{86} \\
& \mathrm{MSw}=49.59
\end{aligned}
$$

9. $\mathrm{F}_{\text {value }}$

$$
\begin{aligned}
& \mathrm{F}_{\text {value }}=\frac{M S b}{M S w} \\
& \mathrm{~F}_{\text {value }}=\frac{561.31}{49.59} \\
& \mathrm{~F}_{\text {value }}=\mathbf{1 1 . 3 2}
\end{aligned}
$$

10. Table of One-Way ANOVA manual calcualtion

Table. 4.9 One-Way ANOVA manual calcualtion

|  | Sum of <br> Squares | Degree of <br> Freedom <br> (Df) | Mean <br> Square | $\mathrm{F}_{\text {Value }}$ | Sig |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Between Group | 1122.63 | 2 | 561.31 | 11.32 | .00 |
| Within Group | 4264.98 | 86 | 49.59 |  |  |
| Total | 5387.61 | 88 |  |  |  |

$$
\begin{aligned}
& \text { 11. } \mathrm{F}_{\text {crittable }} \\
& =3.11 \\
& \mathrm{~F}_{\text {value }} \quad=11.32 \\
& \mathrm{~F}_{\text {value }} \geq \mathrm{F}_{\text {crittable }}=11.32 \geq 3.11
\end{aligned}
$$

12. $\mathrm{F}_{\text {value }} \leq \mathrm{F}_{\text {table }} \quad=\mathrm{H}_{\mathrm{o}}$ is accepted
$\mathrm{F}_{\text {value }} \geq \mathrm{F}_{\text {table }} \quad=\mathrm{H}_{\mathrm{o}}$ is refused

Since $F_{\text {value }}$ was higher than $F_{\text {table }}(11.32 \geq 3.11)$, It meant $H_{o}$ was refused and $\mathrm{H}_{\mathrm{a}}$ was accepted. There was significant diffrences among groups.
b. One Way ANOVA SPSS 17.0 Calculation

To make sure the manual calculation, SPSS 17.0 statistic progam was conducted in this study.

Table 4.10. One Way ANOVA SPSS 17.0

## ANOVA

|  | Sum of <br> Squares | df | Mean Square | F | Sig. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Between Groups | 1122.63 | 2 | 561.31 | 11.32 | .00 |
| Within Groups | 4264.98 | 86 | 49.59 |  |  |
| Total | 5387.61 | 88 |  |  |  |

Based on the SPSS 17.0 statistic program calculation, the result showed that Degree of Freedom Between Groups ( DFb ) $=2$ and Degree of Freedom Within Groups $(\mathrm{DFw})=86\left(\mathrm{~F}_{\text {table }}=3.11\right)$. Then $\mathrm{F}_{\text {value }}$ was 11.32. It showed $\mathrm{F}_{\text {value }}$ was higher than $\mathrm{F}_{\text {table }}(11.32 \geq 3.11)$. So, $\mathrm{H}_{\mathrm{o}}$ was refused and $\mathrm{H}_{\mathrm{a}}$ was accepted. There was signifcant differences among groups after doing the treatment, with $\mathrm{F}_{\text {value }}=11.32$ and the significant level was lower than alpha $(\boldsymbol{\alpha})(0.00 \leq 0.05)$.

Knowing that there was significant differences among groups after doing the treatment, researcher needed to test the hypotheses. Because ANOVA was only to know that there was significant differences among groups, not to
know where the differences among groups are, to answer the research problems and test the hypotheses, researcher applied Post Hoc Test.

Table 4.11. Post Hoc Test

Multiple Comparisons

|  |  | Mean Differe |  |  | $\begin{array}{r} 95 \% \mathrm{C} \\ \text { In } \\ \hline \end{array}$ | onfidence erval |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Groups | Groups | $\begin{gathered} \text { nce (I- } \\ \text { J) } \end{gathered}$ | Std. <br> Error | Sig. | Lower Bound | Upper Bound |
| Self-Correct | Self-Repair | 3.15 | 1.82 | . 20 | -1.19 | 7.48 |
|  | Control Group | 8.63* | 1.83 | . 00 | 4.26 | 13.01 |
| Self-Repair | Self-Correct | -3.15 | 1.82 | . 20 | -7.48 | 1.19 |
|  | Control Group | 5.49* | 1.83 | . 01 | 1.11 | 9.86 |
| Control Group | Self-Correct | -8.63* | 1.83 | . 00 | -13.01 | -4.26 |
|  | Self-Repair | -5.49* | 1.83 | . 01 | -9.86 | -1.11 |

*. The mean difference is significant at the 0.05 level.
The criteria of $\mathrm{H}_{0}$ is accepted when the significant value is higher than alpha ( $\boldsymbol{\alpha}$ ) (0.05), and $\mathrm{H}_{0}$ is refused when the significant value is lower than alpha ( $\alpha$ ) (0.05).

The first research problem was: Is there significant effect of teacher's corrective feedback using self-correct during oral interaction on speaking score of the eleventh grade students at SMA Negeri 1 Katingan Tengah; and the hypotheses are: a. Null Hypothesis (Ho): There is no significant effect of teacher's corrective feedback using self- correct on students' speaking score. b. Alternative Hypothesis (Ha): There is significance effect of teacher's corrective feedback using self-correct on students' speaking a score. Based on the
calculation used SPSS 17.0 statistic program, the result showed significant value was lower than alpha ( 0.00 lower $\leq 0.05$ ). So, Ho was refused and Ha was accepted, that giving feedback by Self-Correct method had significant effect on students' speaking score of the eleventh grade students at SMA Negeri 1 Katingan Tengah.

Second research problem was: Is there significant effect of teacher's corrective feedback using self-repair during oral interaction on speaking score of the eleventh grade students at SMA Negeri 1 Katingan Tengah; and the hypotheses are: a. Null Hypothesis (Ho); There is no significant effect of teacher's corrective feedback using self- repair on students' speaking score. b. Alternative Hypothesis (Ha); There is significance effect of teacher's corrective using feedback self-repair on students' speaking score. Based on the calculation used SPSS 17.0 statistic program, the result showed significant value was lower than alpha ( $0.01 \leq 0.05$ ). So, Ho was refused and Ha was accepted, that giving feedback by Self-repair method had significant effect on students' speaking score of the eleventh grade students at SMA Negeri 1 Katingan Tengah.

The third research problem was: Which type of corrective feedback is more effective on students' speaking score; and the hypotheses: a. Null Hypothesis (Ho); There is no significant different effect between teacher's corrective feedback feedback self-repair and self- correct on students' speaking score. b. Alternative Hypothesis (Ha); There is significant different effect between teacher's corrective feedback feedback self-repair and self-correct on students' speaking score. Based on the calculation used SPSS 17.0 statistic program, the
result showed significant value was higher than alpha ( $0.20 \geq 0.05$ ). So, Ho was accepted and Ha was refused, that there is no different effect between teacher's corrective feedback feedback self-repair and self- correct on students' speaking score of the eleventh grade students at SMA Negeri 1 Katingan Tengah.
c. Interpretation

Based on the resul of the research, researcher interpretated that:

1. Teacher's corrective feedback using self-correct was more effective on students' speaking score than teaching English without giving the corrective feedback. It was shown that the result showed significant value was lower than alpha ( 0.00 lower $\leq 0.05$ ).
2. Teacher's corrective feedback using self-repair was more effective on students' speaking score than teaching English without giving the corrective feedback. It was shown that the result showed significant value was lower than alpha ( 0.01 lower $\leq 0.05$ ).
3. There was no significant different effect between teacher's corrective feedback using self-repair and self-correct on students' speaking score, both methods were effective in improving students' speaking score. It was based on the calculation used SPSS 17.0 statistic program, the result showed significant value was higher than alpha $(0.20 \geq 0.05)$. Based on the output of the Mean, it can be concluded that Self-Correct (Mean: 74.63) is more effective than Self-Repair (Mean: 71.48).
