

CHAPTER VI

CLOSURE

CHAPTER VI

CLOSURE

In this part, researcher gave the conclusion and suggestion about the result of study. The conclusion of the study was to answer the problems of the research. The suggestion are expected to make better improvement and motivation for students, teacher and researcher related with teaching writing using clustering technique.

A. Conclusion

Based on the calculation using One Way ANOVA and Post Hoc Test, the result showed:

First, there was significant effect of using clustering technique on writing ability of the eleventh grade students at MAN Model Palangka Raya. It was shown that the result showed the significant value was lower than alpha ($0.00 \text{ lower} \leq 0.05$).

Second, there was significant effect of using clustering technique on writing apprehension of the eleventh grade students at MAN Model Palangka Raya. It was shown that the result showed the significant value was lower than alpha ($0.01 \text{ lower} \leq 0.05$).

Third, there was any significant effect between teaching writing using clustering technique on writing ability and apprehension of the eleventh grade students at MAN Model Palangka Raya. It was shown from the the result of the data analysis showed that the significant value was higher than alpha ($0.81 \geq 0.05$).

B. Suggestion

According to the conclusion of the research result, researcher would like to propose some suggestions for the students, teachers and the researchers as follow:

1. Students

The students should practice more how to write accurately. If the teacher gives technique using clustering, the students should remember what they will do before writing to gain idea. Beside that, clustering technique can increase their writing apprehension.

2. Teacher

The researcher recommended the English teacher to apply these types of clustering technique in teaching English writing generally, and in increasing students writing apprehension especially. So it can help the students to be able to write English Accurately. It is because the result of the study showed that the effect of these types of clustering technique were effective on students' writing ability and apprehension.

3. Future Researchers

In this study, the researcher realized that design of the study was very simple. There are still many weaknesses that could be seen. Therefore, for further researcher; it is expected that the other researchers can improve this study with better design and different object in order to support the result finding. In other word, the other researcher can use this research as the reference for conducting their research.
