CHAPTER V

CONCLUSION AND SUGGESTION

This chapter discusses: conclusion and suggestion.

A. Conclusion

In order to answer the research problem of the study; there are two criteria to be used: 1) Research problems should indicate or specify the variables. 2) Research problems should indicate research design.

In terms of the research problems which should indicate or specify the variables, the writer found that there are one hundred forty five (145) theses from graduated 2012 to 2014. In terms of the research problems which should indicate research design, there are eighty nine (89) students used quantitative design, forty seven (47) students used qualitative design, two (2) students used research and development (R&D), and seven (7) students used mixed design.

B. Suggestion

1. Advisors

It can help the advisors to identify the types of research problem that students used consist of criteria.

2. The students

It helps the students to learn about research problem, especially how to differ the types of research problem with the other criteria.
3. Next researcher

The writer admitted this research is not perfect enough. For this reason, the writer hopes for the next researcher who want to explore same topic could add different methods and techniques. The result of this study could be one of source data or reference which support another research.
