## CHAPTER IV

## RESULT AND DISCUSSION

In this chapter, the writer presents the data which had been collected from the research in the field of study. The data were the result of pretest-posttest of experimental group and control group, the result of data analysis, discussion.

## A. Result

In this section described the obtained data of the effectiveness of team pair solo technique on speaking performance score of the eighth graders of SMP Negeri 1 Palamgka Raya. The presented data consisted of distribution of pretest score of experiment and control groups and also the distribution of posttest score of experiment and control groups.

## 1. The Result of Pretest Score of Experimental Group and Control Group

The students' pretest score are distributed in the following table in order to analyze the students' knowledge before conducting the treatment.

Table 1.6 Pretest Score of the Experiment and Control Group

| Experiment Group |  |  | Control Group |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Code | Score | Classification | Code | Score | Classification |
| E01 | 25 | Poor | C01 | 20 | Very Poor |
| E02 | 50 | Fairly Good | C02 | 55 | Fairly Good |
| E03 | 45 | Fairly Good | C03 | 70 | Good |
| E04 | 45 | Fairly Good | C04 | 20 | Very Poor |
| E05 | 75 | Good | C05 | 55 | Fairly Good |
| E06 | 65 | Good | C06 | 55 | Fairly Good |
| E07 | 55 | Fairly Good | C07 | 65 | Good |
| E08 | 45 | Fairly Good | C08 | 50 | Fairly Good |
| E09 | 55 | Fairly Good | C09 | 40 | Poor |
| E10 | 45 | Fairly Good | C10 | 45 | Fairly Good |
| E11 | 40 | Poor | C11 | 55 | Fairly Good |
| E12 | 80 | Good | C12 | 20 | Very Poor |
| E13 | 80 | Good | C13 | 40 | Poor |
| E14 | 55 | Fairly Good | C14 | 55 | Fairly Good |
| E15 | 25 | Poor | C15 | 50 | Fairly Good |
| E16 | 40 | Poor | C16 | 30 | Poor |
| E17 | 40 | Poor | C17 | 75 | Good |
| E18 | 35 | Poor | C18 | 55 | Fairly Good |
| E19 | 75 | Good | C19 | 45 | Fairly Good |
| E20 | 25 | Poor | C20 | 60 | Fairly Good |
| E21 | 55 | Fairly Good | C21 | 45 | Fairly Good |
| E22 | 80 | Good | C22 | 20 | Very Poor |
| E23 | 65 | Good | C23 | 60 | Fairly Good |
| E24 | 60 | Fairly Good | C24 | 55 | Fairly Good |
| E25 | 45 | Fairly Good | C25 | 40 | Poor |
| E26 | 45 | Fairly Good | C26 | 55 | Fairly Good |
| E27 | 35 | Poor | C27 | 50 | Poor |
| E28 | 55 | Fairly Good | C28 | 60 | Fairly Good |
| E29 | 20 | Very Poor | C29 | 40 | Poor |
| E30 | 55 | Fairly Good | C30 | 25 | Poor |
| E31 | 20 | Very Poor | C31 | 45 | Fairly Good |
| E32 | 65 | Good | C32 | 55 | Poor |

## a. The Result of Pretest Score of Experimental Group

The pretest was conducted on Saturday $19^{\text {th }}$ December 2015 in the VIII 3 class. The students' pretest score of experiment group were distributed in the
following table in order analyzing the students' background knowledge of speaking performance score before the treatment. Then, it was presented using distribution frequency in the following table:

Table 1.7 Frequency Distribution of Pretest Experiment Group

Experiment

|  | Frequency | Percent | Valid Percent | Cumulative <br> Percent |
| :--- | ---: | ---: | ---: | ---: |
| 20 | 2 | 6,3 | 6,3 | 6,3 |
| 25 | 3 | 9,4 | 9,4 | 15,6 |
| 35 | 2 | 6,3 | 6,3 | 21,9 |
| 40 | 3 | 9,4 | 9,4 | 31,3 |
| 45 | 6 | 18,8 | 18,8 | 50,0 |
| 50 | 1 | 3,1 | 3,1 | 53,1 |
| Valid | 6 | 18,8 | 18,8 | 71,9 |
| 55 | 1 | 3,1 | 3,1 | 75,0 |
| 60 | 3 | 9,4 | 9,4 | 84,4 |
| 65 | 2 | 6,3 | 6,3 | 90,6 |
| 75 | 3 | 9,4 | 9,4 | 100,0 |
| 80 | 32 | 100,0 | 100,0 |  |
| Total |  |  |  |  |

The distribution of students' predicate in pretest score of experiment group can also be seen in the following figure.

Figure 1.1 The Distribution of Students' Predicate in Pretest Score of Experimental Group

Based on the figure above, it can be seen that the students' predicate in pretest score. There were two students who got very poor predicate. They are E-29 and E-31. There were eight students who got poor predicate. They are E-01, E-11, E-15, E-16, E-17, E-18, E-20, and E-27. There were fourteen students who got fairly good predicate. They are E-02, E-03, E-04, E-07, E-08, E-09, E-10, E-14, E-21, E-24, E-25, E-26, E-28, and E-30. There were eight students who got good predicate. They are E-05, E-06, E-12, E-13, E-19, E-22, E-23, and E-32, and there were not students who got very good predicate.

The next step, the writer calculated the scores of mean, median, mode, standard error of mean, and standard deviation using SPSS 21 program as follows.

Table 1.8 the calculation of Mean, Median, Mode, Standard Error of Mean, and Standard Deviation.

## Statistics

Experiment

| N | Valid | 32 |
| :--- | :--- | ---: |
|  | Missing | 0 |
| Mean | 50,00 |  |
| Std. Error of | 3,086 |  |
| Mean |  |  |
| Median | 47,50 |  |
| Mode | $45^{\mathrm{a}}$ |  |
| Std. Deviation | 17,460 |  |
| Minimum | 20 |  |
| Maximum | 80 |  |

Based on the calculation above, the higher score pretest of experimental group was 80 , the lowest score was 20 , the result of mean was 50.00 , median was 47.50 , mode was 45 , standard error of mean was 3.086 , and the standard deviation was 17.460.

## b. The Result of Pretest Score of Control Group

The pretest was conducted on Saturday $21^{\text {st }}$ December 2015 in the VIII 2 class. The students' pretest score of control group were distributed in the following table in order analyzing the students' background knowledge of speaking performance score before the treatment. Then, it was presented using distribution frequency in the following table:

Table 1.9 Frequency Distribution of Pretest Control Group

Control

|  | Frequency | Percent | Valid Percent | Cumulative <br> Percent |
| :---: | ---: | ---: | ---: | ---: |
| 20 | 4 | 12,5 | 12,5 | 12,5 |
| 25 | 1 | 3,1 | 3,1 | 15,6 |
| 30 | 1 | 3,1 | 3,1 | 18,8 |
| 40 | 4 | 12,5 | 12,5 | 31,3 |
| 45 | 4 | 12,5 | 12,5 | 43,8 |
| 50 | 3 | 9,4 | 9,4 | 53,1 |
| Valid | 9 | 28,1 | 28,1 | 81,3 |
| 55 | 3 | 9,4 | 9,4 | 90,6 |
| 60 | 1 | 3,1 | 3,1 | 93,8 |
| 65 | 1 | 3,1 | 3,1 | 96,9 |
| 70 | 1 | 3,1 | 3,1 | 100,0 |
| 75 | 32 | 100,0 | 100,0 |  |
| Total |  |  |  |  |

The distribution of students' predicate in pretest score of experiment group can also be seen in the following figure.

Figure 1.2 The Distribution of Students' Predicate in Pretest Score of Control Group

Based on the figure above, it can be seen that the students' predicate in pretest score. There were four students who got very poor predicate. They are C$01, \mathrm{C}-04, \mathrm{C}-12$, and $\mathrm{C}-22$. There were eight students who got poor predicate. They are $\mathrm{C}-09, \mathrm{C}-13, \mathrm{C}-16, \mathrm{C}-25, \mathrm{C}-27, \mathrm{C}-29, \mathrm{C}-30$, and $\mathrm{C}-31$. There were seventeen students who got fairly good predicate. They are C-02, C-05, C-06, C-08, C-10, $\mathrm{C}-11, \mathrm{C}-14, \mathrm{C}-15, \mathrm{C}-18, \mathrm{C}-19, \mathrm{C}-20, \mathrm{C}-21, \mathrm{C}-23, \mathrm{C}-24, \mathrm{C}-26, \mathrm{C}-28$, and $\mathrm{C}-31$. There were three students who got good predicate. They are C-03, C-07, and C17, and there were not students who got very good predicate.

The next step, the writer calculated the scores of mean, median, mode, standard error of mean, and standard deviation using SPSS 21 program as follows.

Table 2.0 The calculation of Mean, Median, Mode, Standard Error of Mean, and Standard Deviation.

| Statistics |  |
| :---: | :---: |
| Control |  |
| Valid | 32 |
| N Missing | 0 |
| Mean | 47,19 |
| Std. Error of | 2,589 |
| Mean |  |
| Median | 50,00 |
| Mode | 55 |
| Std. Deviation | 14,643 |
| Minimum | 20 |
| Maximum | 75 |

Based on the calculation above, the higher score pretest of control group was 75 , the lowest score was 20 , the result of mean was 47.19 , median was 50.00 , mode was 55 , standard error of mean was 2.589 , and the standard deviation was 14.643.

## 2. The Result of Posttest Score of Experimental Group and Control

## Group

The students' posttest score are distributed in the following table in order to analyze the students' knowledge before conducting the treatment.

Table 2.1 Posttest Score of the Experiment and Control Group

| Experiment Group |  |  | Control Group |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Code | Score | Classification | Code | Score | Classification |
| E01 | 55 | Fairly Good | C01 | 40 | Poor |
| E02 | 65 | Good | C02 | 45 | Fairly Good |
| E03 | 60 | Fairly Good | C03 | 80 | Good |
| E04 | 65 | Good | C04 | 40 | Poor |
| E05 | 75 | Good | C05 | 65 | Fairly Good |

| E29 | 35 | Poor | C29 | 50 | Fairly Good |
| E30 | 65 | Good | C30 | 40 | Poor |
| E31 | 40 | Poor | C31 | 45 | Fairly Good |
| E32 | 65 | Good | C32 | 55 | Fairly Good |

## a. The Result of Posttest Score of Experimental Group

The posttest was conducted on Saturday $11^{\text {th }}$ January 2016 in the VIII 3 class. The students' posttest score of experiment group were distributed in the following table in order analyzing the students' background knowledge of speaking performance score before the treatment. Then, it was presented using distribution frequency in the following table:

Table 2.2 Frequency Distribution of Posttest Experiment Group

| Experiment |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: |
| Frequency | Percent | Valid Percent | Cumulative <br> Percent |  |
| 45 | 2 | 6,3 | 6,3 | 6,3 |
| 40 | 1 | 3,1 | 3,1 | 9,4 |
| 45 | 2 | 6,3 | 6,3 | 15,6 |
| 50 | 3 | 9,4 | 9,4 | 25,0 |
| Valid | 2 | 6,3 | 6,3 | 31,3 |
| 65 | 6 | 18,8 | 18,8 | 50,0 |
| 60 | 9 | 28,1 | 28,1 | 78,1 |
| 65 | 3 | 9,4 | 9,4 | 87,5 |
| 75 | 4 | 12,5 | 12,5 | 100,0 |
| 80 | 32 | 100,0 | 100,0 |  |

The distribution of students' predicate in posttest score of experiment group can also be seen in the following figure.

Figure 1.3 The Distribution of Students' Predicate in Posttest Score of Experimental Group

Based on the figure above, it can be seen that the students' predicate in posttest score. There were not students who got very poor predicate. There were three students who got poor predicate. They are E-27, E-29, and E-31. There were three teen students who got fairly good predicate. They are E-01, E-04, E-07, E10, E-11, E-15, E-16, E-17, E-18, E-20, E-21, E-24, and E-28. There were sixteen students who got good predicate. They are E-02, E-04, E-05, E-06, E-08, E-09, E12, E-13, E-14, E-19, E-22, E-23, E-25, E-26, E-30, and E-32, and there were not students who got very good predicate.

The next step, the writer calculated the scores of mean, median, mode, standard error of mean, and standard deviation using SPSS 21 program as follows.

Table 2.3 The calculation of Mean, Median, Mode, Standard Error of Mean, and Standard Deviation.

## Statistics

Experiment

| N | Valid | 32 |
| :--- | :--- | ---: |
|  | Missing | 0 |
| Mean | 60,94 |  |
| Std. Error of | 2,227 |  |
| Mean |  |  |
| Median | 62,50 |  |
| Mode | 65 |  |
| Std. Deviation | 12,600 |  |
| Minimum | 35 |  |
| Maximum | 80 |  |

Based on the calculation above, the higher score posttest of experiment group was 80 , the lowest score was 35 , the result of mean was 60.94 , median was 62.50 , mode was 65 , standard error of mean was 2.227 , and the standard deviation was 12.600 .

## b. The Result of Posttest Score of Control Group

The posttest was conducted on Tuesday $5^{\text {th }}$ January 2016 in the VIII 2 class. The students' posttest score of control group were distributed in the following table in order analyzing the students' background knowledge of speaking performance score before the treatment. Then, it was presented using distribution frequency in the following table:

Table 2.4 Frequency Distribution of Pretest Control Group

The distribution of students' predicate in posttest score of experiment group can also be seen in the following figure.

Figure 1.4 The Distribution of Students' Predicate in Posttest Score of Control Group

Based on the figure above, it can be seen that the students' predicate in posttest score. There were two students who got very poor predicate. They are C12 and C-22. There were four students who got poor predicate. They are C-01, C$04, \mathrm{C}-16$, and C-30. There were twenty three students who got fairly good predicate. They are C-02, C-05, C-06, C-07, C-08, C-09, C-10, C-11, C-13, C-14, C-15, C-17, C-18, C-19, C-20, C-21, C-23, C-24, C-25, C-26, C-27, C-29, C-31, and C-32. There were two students who got good predicate. They are C-03 and C28 , and there were not students who got very good predicate.

The next step, the writer calculated the scores of mean, median, mode, standard error of mean, and standard deviation using SPSS 21 program as follows.

Table 2.5 The Calculation of Mean, Median, Mode, Standard Error of Mean, and Standard Deviation.

| Statistics |  |
| :--- | :---: |
| Control   <br> N Valid 32 <br>  Missing 0 <br> Mean  52,03 <br> Std. Error of 2,221  <br> Mean   <br> Median 55,00  <br> Mode 55  <br> Std. Deviation 12,563  <br> Minimum 20  <br> Maximum 80  |  |

Based on the calculation above, the higher score posttest of control group was 80 , the lowest score was 20 , the result of mean was 52.03 , median was 55.00 , mode was 55 , standard error of mean was 2.221 , and the standard deviation was 12.563 .
3. The Comparison Result of Pre-test and Post-test of Experimental and Control Group

Table 2.6 The Comparison Result of Pre-test and Post-test of Experimental
and Control Group

| Experimental Group |  |  |  |  | Control Group |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| No | Code | Pretest | Posttest | Difference | Code | Pretest | Posttest | Difference |
| 1 | E01 | 25 | 55 | 30 | C01 | 20 | 40 | 20 |
| 2 | E02 | 50 | 65 | 15 | C02 | 55 | 45 | -10 |

## 4. Testing the Normality and Homogeneity

a. Normality Test

The writer used SPSS 21 to measure the normality of the data.

Table 2.7 Testing Normality of Posttest Experimental and

Control Group

One-Sample Kolmogorov-Smirnov Test

|  |  | Experiment | Control |
| :--- | :--- | ---: | ---: |
| N |  | 32 | 32 |
|  | Mean | 60,94 | 52,03 |
| Normal Parameters $^{\mathrm{a}, \mathrm{b}}$ | Std. | 12,600 | 12,563 |
|  | Deviation |  |  |
|  | Absolute | , 158 | , 156 |
| Most Extreme | Positive | , 155 | , 138 |
| Differences | Negative | ,- 158 | ,- 156 |
| Kolmogorov-Smirnov Z | , 893 | , 882 |  |
| Asymp. Sig. (2-tailed) | , 403 | , 418 |  |

a. Test distribution is Normal.
b. Calculated from data.

The table showed the result of test normality calculation using SPSS 21.0 program. To know the normality of data, the formula could be seen as follows:

If Significance $>0.05=$ data is normal distribution

If Significance $<0.05=$ data is not normal distribution.

Based on the data above, it could be seen that p-value (sig) of the posttest scores of the experiment group was 0.403 and control group was 0.418 which
higher than the level significance ( 0.05 ). Thus, it be concluded that the data was normal distribution.

## b. Homogeneity Test

Table 2.8 Testing Homogeneity of Posttest Experimental and Control

## Group

## Test of Homogeneity of Variances

| Levene <br> Statistic | df1 | df2 | Sig. |
| :--- | ---: | ---: | ---: |
| 2,406 |  | 6 | 23 |

The table showed the result of homogeneity test calculation using SPSS 21.0 program. To know the homogeneity of data, the formula could be seen as follows:

If Sig. $>0.05=$ data is normal distribution

If Sig. $<0.05=$ data is not normal distribution

Based on the data above, significant data is 0.06 . The result is $0.60>0.05$. It meant that the result of posttest of experiment and control group were homogenous.

## 5. Result Data Analysis

## a. Testing Hypothesis Using Manual Calculation

To test the hypothesis of the study, the writer used t-test statistical calculation. Firstly, the writer calculated the standard deviation and the error of $X_{1}$ and $X_{2}$ at the previous data presentation. It could be seen on this following table:

Table 2.9 The Standard Deviation and Standard Error of $X_{1}$ and

$$
\mathbf{X}_{2}
$$

| Variable | Standard Deviation | Standard Error |
| :---: | :---: | :---: |
| $\mathbf{X}_{\mathbf{1}}$ | 12.600 | 2.227 |
| $\mathbf{X}_{\mathbf{2}}$ | 12.563 | 2.221 |

$$
\begin{array}{ll}
\mathrm{X}_{1} & =\text { Experimental Group } \\
\mathrm{X}_{2} & =\text { Control Group }
\end{array}
$$

The table showed the result of the standard deviation calculation of $\mathrm{X}_{1}$ was 12.600 and the result of the standard error of was 2.227 . The result of the standard deviation of $\mathrm{X}_{2}$ was 12.563 and the result of the standard error was 2.221 .

The next step, the writer calculated the standard error of the difference mean between $\mathrm{X}_{1}$ and $\mathrm{X}_{2}$ as follows:

Standard error of mean of score difference between Variable I and Variable II

$$
\begin{aligned}
& \mathrm{SE}_{\mathrm{M} 1}-\mathrm{SE}_{\mathrm{M} 2}=\mathrm{SE}_{\mathrm{M} 1}^{2}+\mathrm{SE}_{\mathrm{M} 2}^{2} \\
& \mathrm{SE}_{\mathrm{M} 1}-\mathrm{SE}_{\mathrm{M} 2}=\sqrt{(2.227)^{2}+(2.221)^{2}} \\
& \mathrm{SE}_{\mathrm{M} 1}-\mathrm{SE}_{\mathrm{M} 2}=\sqrt{4.95953+4.93284} \\
& \mathrm{SE}_{\mathrm{M} 1}-\mathrm{SE}_{\mathrm{M} 2}=\sqrt{9.89237} \\
& \mathrm{SE}_{\mathrm{M} 1}-\mathrm{SE}_{\mathrm{M} 2}=3.14521
\end{aligned}
$$

The calculation above showed the standard error of the differences mean between $X_{1}$ and $X_{2}$ was 3.14521. Then, it was interested to the $t_{\text {test }}$ formula to get the value of $t_{\text {test }}$ as follows:

$$
\begin{aligned}
& \mathrm{t}_{\mathrm{o}}=\frac{M 1-M 2}{S E m 1-S E m 2} \\
& \mathrm{t}_{\mathrm{o}}=\frac{60.94-52.03}{3.14521} \\
& \mathrm{t}_{\mathrm{o}}=\frac{8.91}{3.14521} \\
& \mathrm{t}_{\mathrm{o}}=2.831
\end{aligned}
$$

Which the criteria:

If t -test $\geq \mathrm{t}$-table, Ha is accepted and Ho is rejected

If t -test $\leq \mathrm{t}$-table, Ha is rejected and Ho is accepted

Then, the writer interpreted the result of t-test; previously, the writer accounted the degree of freedom (df) with the formula:

Df $\quad=\left(\mathrm{N}_{1}+\mathrm{N}_{2}\right)-2$

$$
=32+32-2=62
$$

The writer chose the significant levels at $5 \%$, it means the significant level of refusal of null hypothesis at $5 \%$. The writer decided the significant level at 5\% due to hypothesis typed stated on non-directional (two-tailed test). It meant that hypothesis cannot direct the prediction of alternative hypothesis. Alternative hypothesis symbolized by " 1 ". This symbol could direct the answer of hypothesis, " 1 " can be $(>)$ or $(<)$. The answer of hypothesis could not be predicted whether on more than or less than.

The calculation above showed at the result of t-test calculation as in the table follows:

Table 3.0 The Result of T-Test Using Manual Calculation

| Variable | T test | T table |  | Df |
| :---: | :---: | :---: | :---: | :---: |
|  |  | $\mathbf{5 \%}$ | $\mathbf{1 \%}$ |  |
| $\mathrm{X}_{1}-\mathrm{X}_{2}$ | 2.831 | 1.999 | 2.657 | 62 |

Where:

| $\mathrm{X}_{1}$ | $=$ Experimental Group |
| :--- | :--- |
| $\mathrm{X}_{2}$ | $=$ Control Group |
| T test | $=$ The Calculated Value |
| T table | $=$ The Distribution of t Value |
| Df | $=$ Degree of Freedom |

Based on the result of hypothesis test calculation, it was found that the value of $t$ observed was greater than the value of $t$ table at $1 \%$ and $5 \%$ significance level or $1.999<2.831>2.657$ it means $\mathrm{H}_{\mathrm{a}}$ was accepted and $\mathrm{H}_{\mathrm{o}}$ was rejected. It could be interpreted based on the result of calculation that $\mathrm{H}_{\mathrm{a}}$ stating that Team Pair Solo was effective technique on speaking performance of the eight graders of SMP N 1 Palangka Raya was accepted and $\mathrm{H}_{\mathrm{o}}$ stating that Team Pair Solo was effective technique on speaking performance of the eight graders of SMP N 1 Palangka Raya was rejected. It meant that team pair solo technique was effective for speaking performance score of the eight graders of SMP N 1 Palangka Raya gave effect 5\% and $1 \%$ significant level.

## b. Testing Hypothesis Using SPSS 21.0 Program

The writer also applied SPSS 21.0 program to calculate $t$-test in testing hypothesis of the study. The result of the $t$-test using SPSS 21.0 program could be seen as follows:

Table 3.1 Mean, Standard Deviation and Standard Error of Experiment Group and Control Group using SPSS 21.0 Program

## Group Statistics

|  | Group | N | Mean | Std. <br> Deviation | Std. Error <br> Mean |
| :--- | :--- | ---: | ---: | ---: | ---: |
| Score | Experiment | 32 | 60,94 | 12,600 | 2,227 |
|  | Control | 32 | 52,03 | 12,563 | 2,221 |

The table showed the result of mean of experiment group was 60.94 , standard deviation was 12.600 , and standard error of mean was 2.2227 . The result of mean of control group was 52.03 , standard deviation was 12.563 and standard error of mean was 2.221.

Table 3.2 The Calculation of T-Test Using SPSS 21.0

Independent Samples Test

|  |  | Levene's <br> Test for Equality of Variances |  | t-test for Equality of Means |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | F | Sig. | t | df | Sig. (2tailed) | Mean <br> Differe nce | Std. <br> Error Differe nce | 95\% <br> Confidence Interval of the Difference |  |
|  |  | Lower |  |  |  |  |  |  | Upper |
| Score | Equal <br> variances assumed <br> Equal <br> variances <br> not assumed |  | ,041 | , 840 | $\begin{gathered} 2,831 \\ 2,831 \end{gathered}$ | $\begin{array}{r} 62 \\ \\ 61,99 \\ 9 \end{array}$ | ,006, 006, | $\begin{aligned} & 8,906 \\ & 8,906 \end{aligned}$ | $\begin{aligned} & 3,145 \\ & 3,145 \end{aligned}$ | 2,619 | 15,194 15,194 |

The table showed the result t-test calculation using SPSS 21.0 program. To
know the variances score of data, the formula could be seen as follows:

If Sig. $>0.05=$ Equal variances assumed

If Sig. $<0.05=$ Equal variances assumed

Based on data above, significant data is 0.840 . The result is $0.840>0.05$ it meant the $t$-test calculation uses at the equal variances assumed. It found that the result of $\mathrm{t}_{\text {observed }}$ is 2.831 , the result of mean difference between experiment and control group is 8.906 , and the standard error difference between experiment and control group is 3.145 .

## B. Discussion

The result of analysis showed that there was significant effect of Team Pair Solo (TPS) technique on speaking performance score of the eighth graders of SMP N 1 Palangka Raya. It can be seen from the means score between pretest and posttest. The mean score of posttest reached higher score than the mean score of pretest $(\mathrm{X}=60.94>52.03)$. It indicated that the students score increased after conducting treatment.

In addition, after the data was calculated using $t$ test formula using SPSS 21.0 program showed that the $\mathrm{t}_{\text {observed }}$ was higher than $\mathrm{t}_{\text {table }}$ at $5 \%$ and $1 \%$ significance level or $1.999<2.831>2.657$. It meant Ha is accepted and Ho is rejected. This finding indicated that alternative hypothesis (Ha) stating that there is significant effect of team pair solo (tps) technique on speaking performance score of the eighth graders of SMP Negeri 1 Palangka Raya was accepted. And the null hypothesis (Ho) that stating that there is no significant effect of team pair solo (tps) technique on speaking performance score of the eighth graders of SMP Negeri 1 Palangka Raya was rejected. Team pair solo technique was effective and supported the previous research done by Chandra Argi Pratiwi and Rosita Amalia that also stated teaching speaking by using team pair solo technique was effective.

The results supported theory by Kagan in Chapter II page 20, stated that Team-Pair-Solo is designed to motivate students to tackle and succeed at
problems which initially re beyond their ability. This strategy builds confidence when attempting more difficult content material.

In conducting this research, the writer got some problems. Such us: some students did not participate and wasting time. To overcome those problems above the writer did several ways. First, the writer did controlling intensively to each group. (See p. 22). Teacher divides the students into teams. Each team consists of 4 students. Students work as a team to solve a problem or accomplish a task. In this phase, the teacher should be controlled the students during discussing. Meant, the writer paid attention on the students' activity in the group, and warned them if they did not participate. Dealing with the second problem the writer did the class setting. Meant, the class was design to shorten time such as the chairs was arranged based on group.

Those are the result of pretest compared with posttest for experimental group and control group of students at SMP Negeri 1 Palangka Raya. Based on the theories and the writer's result, Team Pair Solo (TPS) technique gave significance effect on speaking performance score of the eighth graders of SMP Negeri 1 Palangka Raya.
